Thread: [Good way to E-Whore/spread your malware](#)

Reverse Engineer. - September 30, 2012, 3:55 am

Things Your gonna need!

- ~Malware! A Rat or KeyLogger most likely, MAKE IT UNDETECTABLE!
- ~An iDevice, this includes(The following) no Mac PC's, or iPods that aren't touches
- ~iPhone
- ~iPod Touch
- ~~~iPad

~A Random picture of some pretty good looking girl, in skimpy clothes, saved to your iDevice, multiple pics of this same girl, tends to be best!(YOU NEED TO HAVE NUDES OF THE SAME GIRL AS WELL! AND MAKE SURE THEY ARE OF LEGAL AGE!)

How It's Done!!

Okay on the App Market are these social apps. They basically allow you to chat with random people! There are many, I remember there was one called "The Shore".. Basically guys go on there to have cybersex. If you don't know what cyber sex is, well...

Cybersex = Saying things that would be actions, in actions declaring parameters. example: "**slowing rubs your arm** haha " What ever isn't in the **...#* is what your supposedly saying.

Anyway! Pretend your that girl, and have a picture of her as your profile picture. And occasionally change it to one of the other pictures you have in your library of this girl. Now time to real the guys in

Men, well most, are horny in nature. So pretending to be a hot girl, willing to send nudes, and cyber-suck his dick... well is most 40 year old virgins DREAM.. Cyber sex them up a little.. but tease them a little, keep them wanting more. This will drive them crazy! Get some way of bringing up the topic of nudes. Tell them you'll send them a download link to a folder of nudes. Now here's what you gotta do!

Hide your malware into the nudes. And Zip the folder up!. Now upload to it to a file sharing website. Doesn't matter. Then send them the download link.

Now when they are fapping away to some random chicks nudes, your malware has already burrowed it's self into their hard drive, and BAM you've taken over their computer

Good share but I don't have an I-phone or anything to do this.

Executive - October 27, 2012, 11:57 am

good share man good job thanks for the help

is there any way you would suggest hiding the malware? Hide it in one of the pics or hide it in the .rar and have it run upon extract

You can use a file binder and extension spoofer to bind it with a picture and make it look like a jpg.
Most crypters contain these.
