Thread: [Source - Currency Exchange Calculator - Calculate the difference in percent.](#)

SomeWhiteGuy - October 2, 2012, 3:05 pm

I was bored and I do a lot of currency exchanges so I thought I would make this right quick.

It only works for LR and PP atm but these are the most exchanged currencies.

Ha ha what a nice program you have made. Will prove too useful for many exchangers but can you add more currencies in it :)

Thanks. I don't exchange any other currencies so I wouldn't know what I should go by. :|

I will definitely though.

$x = (1 - \text{str1} / \text{str2}) * 100$

Am I right?

Am I right?

No.

$x = 100 - (y / z * 100)$

Close though. :)

Not bad. A lot of people in the exchanging center could use this.
