Thread: [\[TUT\] ??? Right To Left OverRide ????? SPOOFING TECHNIQUE ??? \[TUT\]](#)

?Dante - October 4, 2012, 5:57 am

Spoofing Techniques

using

RIGHT TO LEFT OVERRIDE Unicode

NOTE:- This is for educational purpose only. Please don't try to abuse this information in such a way which breaks cyber laws and send you jail.

Introduction:-

Hello everyone. :))

First of all, this is my first ever written tutorial on HF so if you find any mistakes, please do post here so that I can correct them. I didn't found any other tutorial covering 'URL spoofing' with RTLO so I planned to make one of MINE. ;) In this tutorial we'll talk about some extension and url spoofing techniques by the NOT so famous RTLO or "RIGHT TO LEFT OVERRIDE" Unicode character which helps to read some languages which are written "right-to-left" like Arabic etc. I think we all know what spoofing is, but if someone don't know; just GOOGLE it. ;) I'm not going to clear that here. :P

Spoofing 'file type extension' with Right-to-Left Override:-

A nice tutorial explaining everything about it can be found [here](#)

e.g.

This "HotWebCamGirl[RTLO]gpj.exe" can be read as HotWebCamGirlexe.jpg"

Amazed? ?...you can spoof ANY file type to ANY other file type of YOUR personal choice. :D
I wonder, what can be done with THIS particular sexy spoofing technique. ;)

You can just THINK about the possibilities the RTLO opens for you. ?

But, saying from my personal experience, this RTLO technique WON'T work on XP (including all service packs) but will work FINE on Windows 7.

Spoofing 'URL' with Right-to-Left-Override:-

Now THIS is MORE juicy part of the RTLO. You can spoof the URLs too with the RTLO which is NOT so exciting as URLs are also ASCII text which uses RTLO. Just take a look at the example and you'll know what I'm trying to say.

e.g.

This-

[RTLO] <http://www.maliciouswebsite.com/moc.koobecaf.www//:ptth>

Will look like-

<http://www.facebook.com/moc.etisbewsuoicilam.www//:ptth>

See?

Just spoof ANY url then convince your slave open it. (SE him/her)
I found THIS the MOST enjoyable sort of spoofing of ALL time (I would use this in a funny way ;)) .
Well, you can use it in ANY way. Some people (or crackers) use this technique to fulfill their dirty needs like sending SPOOFED URLs pointing towards a PHISHING page.?

For example, assume you're chatting with a hot girl and suddenly she gives you a link, DON'T be a moron to click that link RIGHT AWAY. Verify that url and see whether it is legit or not. You can consider its IP though. For more info, use your mind and your best friend GOOGLE.

You're getting my point??

So, better watch out for the links you click in future. ?

Conclusion:-

This is it for now. I've shown you two ways of spoofing But there are MORE possibilities like using this RTLO in 'programming languages' like HTML or Java Script.

Got Excited?

Why not ? ?

You should.?

Try these out to see the power of RLTO. Thus, this is an advanced but an easy technique to put off, it's kinda risky too if WE are the slave of someone ELSE (BH h4x0rs).?

I hope you enjoyed the smileys. Thanks to HF for keeping these wonderful smileys so that I could them often to express myself MORE deeply as I love to use them too. ?

Please, do post your comments and responses here as I would love to see that. Also to make this thread active as this seems to be informative. ?

If anyone thinks that I have to add some more techniques here, first POST here THEN PM me about that.

[Some info on RTLO](#)

Jallu - October 4, 2012, 8:01 am

this is awesome didnt think about this!

?Dante - October 4, 2012, 7:00 pm

(Oct 4, 2012 08:01 AM)Wintows Wrote: [\[CITE\]](#) this is awesome didnt think about this!

Yes, we often didn't think about this. Even the one who are aware of this RTLO technique may forget to actually use it when they need it. Although, I'm planning to code a program too, which include "file extension spoofing", "url spoofing", and I might include some of my personal techniques of spoofing using RTLO too.?

Yugen - October 4, 2012, 7:36 pm

It's a very nice tutorial. Not to be a downer but shouldn't this be in the "Hacking Tutorials section?"

Vile Soul - October 4, 2012, 7:39 pm

Thanks for the appreciation mate. And yes, this should be in tutorials section. But as you can see, this is my first tutorial and I was too eager to post it so I didn't even looked where I'm going to post.?

I'd be nice if moderators move this thread to the tutorial section.?

~dantehh...?

83+ views and ONLY 4 replies ?

Guys, at least spare 5 seconds to post your feedback here to keep this thread alive.

I've put much time while writing this tutorial.

Post here guys, I don't wanna have my work to be buried into other threads. ??

cronic_hack - October 10, 2012, 9:39 am

in wrong section dude btw! :P :p :P

R3DH4nD - October 10, 2012, 11:23 am

nice tutorial mate... :)

this is clearly new trick for me..

Thanks for sharing.

?Dante - October 10, 2012, 8:25 pm

Yes, it should be in the tutorials section Mila but I posted it in a haste not even looking at WHERE the **ck I'm going to post. ???

?Dante - November 4, 2012, 9:14 am

Just making this thread alive. ?

Transs - December 9, 2012, 9:30 am

this link aren't showing anything ..
wat is it actually

-?Divine- - December 9, 2012, 9:37 am

Good tutorial mate, but Phishing is not allowed on HackForums. Remove that part.

?WhiskeyPete - December 9, 2012, 10:01 am

Bump, because I like dantehh and I love this tut.

?Dante - December 9, 2012, 10:14 am

SpikedHatz - April 3, 2013, 10:50 am

? WAAHHHH ?

I feel so stupid. I read the article, it made perfect sense, but I'm still confused.
HOW DO YOU DO IT?
How do you make something read right to left? ?
Sorry if Im a simpleton.

Thanks for appreciation. And does is matter "where are from/country etc." ? ?

Bohemia - April 22, 2013, 1:00 pm

Nice and detailed post mate, HQ work.

AlexMobodo - April 27, 2013, 1:21 am

Lovely tutorial, it worked right up until I rar'd my file. PMing you now since you're such an awesome individual who is willing to help <3

OP was really great, helped me out a tonne. Got my icon working properly and was awesome :)

willybobsta - April 27, 2013, 4:54 am

I AM SO CONFUSED :(

Is this a tutorial or is it telling you that you can spoof URLs, I couldn't seem to figure it out if it was a tut...

AlexMobodo - April 27, 2013, 5:10 am

It's a tut! :) a really good one :D

?Dante - April 27, 2013, 6:00 am

(Apr 27, 2013 04:54 AM)willybobsta Wrote: [\[CITE\]](#) I AM SO CONFUSED :(Seriously, don't be. :P

(Apr 27, 2013 04:54 AM)willybobsta Wrote: [CITE](#) Is this a tutorial or is it telling you that you can spoof URLs, I couldn't seem to figure it out if it was a tut...Yes. It IS a tutorial (a short one) which covers some aspects of using RTLO which tell how to spoof URLs as well. ?
Post here your queries and I'll sort 'em out for sure! :)

-Dante

Nick Automatic - April 27, 2013, 11:26 pm

This thread is Amazing and OP is a HQ Member . :)

DiamondHacking - April 29, 2013, 1:54 am

HQ tutorial from a HQ user. Keep it up man.
