Thread: [Rate my official deface page](#)

MANiiMAi - October 5, 2012, 6:13 am

Hey guys, I made my own deface page which I will be using from now on.

The code is 80% mine.

Please rate it:

<http://pastehtml.com/view/cdx68wvvr.html>

Mineo - October 5, 2012, 6:16 am

Wow.. Nice deface page.

You should make more!

Tyler Durden. - October 5, 2012, 6:18 am

Drop the "L33T H4XOR" thing :) else its good, keep up the good work.

MANiiMAi - October 5, 2012, 6:21 am

(Oct 5, 2012 06:18 AM)Mr. Lol Wrote: [\[CITE\]](#) Drop the "L33T H4XOR" thing :) else its good, keep up the good work.

Thanks! What should I change it to?

alignment - October 5, 2012, 6:21 am

Digging that deface page man!

I would like to see some more!

MANiiMAi - October 5, 2012, 6:23 am

Thank you all :)

I really appreciate it!

irZex - October 5, 2012, 6:26 am

really cool!, i'm interested with these type of hacking.. any tutorial related to this that you would suggest?

MANiiMAi - October 5, 2012, 6:30 am

(Oct 5, 2012 06:26 AM)irZex Wrote: [\[CITE\]](#) really cool!, i'm interested with these type of hacking.. any tutorial related to this that you would suggest?

What do you mean? Would you like a deface page or learn to hack? I'm a little confused.

If you want a nice deface page, use the search option, there are some really nice tutorials on there.

This was my very first deface page and I worked on it for about 45-60 minutes.

SIM-1241186 - October 5, 2012, 11:52 am

I like it, looks good. Except the l33t sp33k kind of looks kiddo. Just change it to what you want it to say in normal text.

I very much like the cool looking CMD.

How did you do it?

w0rm. - October 5, 2012, 5:28 pm

Looks good buy as other said change l33t thing replace it with original text.

Perspective - October 5, 2012, 5:32 pm

This looks EXTREMELY like another deface page I've seen.

amus3d - October 5, 2012, 5:33 pm

"80% of the code is mine"

By that do you mean the just text, because I have seen a deface with the exact same javascript text moving thing, the image and the exact same title style (size, alignment, and such).

Tutorial: hackforums.net/showthread.php?tid=2539845

v3xr - October 5, 2012, 5:41 pm

If the code is 80% your own, then you are only 20% skid. Gratz!

It's basic javascript man. If you don't know that much, I doubt this deface will be much use to you...

Tenacious - October 5, 2012, 5:56 pm

You asked us members to rate it, so I'm going to give you my straight, honest opinions.

Everything you have displayed is too stereotypical towards the "L33t H4x0r" stereotype.

That is not a good thing, that makes the rest of us look bad. It's almost like putting a mask on your website, to spook whoever visits, and trying to show off how awesome you are at causing havoc to somebody's website.

Here's a small list of things that you did wrong:

- You used your Alias and displayed it in large letters.
- Used words "D3f4c3d y0u", which is unprofessional.
- Used image displaying the word "Hacker", once again, unprofessional.
- Used stolen code from another defacement page to display that box with the auto typing text.
- Included your twitter, what are you trying to do? Make friends?
- Using false operation phrases such as "Logging into admin panel... Success!".
- Used ugly background, which freezes/stops moving.
- Used necessary code to make the box edges be orange when clicked on, without reason to click on it.
- Refer to yourself as: L33T H@CK3R MANiiMAi_
- Used stereotypical music.

My Diagnostic:

Apologies for my vulgarity but...

- You need to stop telling everyone who the fuck you are, and keep your anonymity.
- You need to drop the whole spooky l33t h4x0r thing, and act more professional. System Security is no joke, it's not a game, it's not something you should be having fun with. It's not something to brag about, it's not something to show off. If you're going to destroy somebody's website, you better have a damn good reason for it, otherwise, you would be a very horrible person.

Final note: Drop the whole Green and Black color coordination, way too many defacement pages have displayed those two colors majorly.

Final Rating: 2/10 (Borderline)

Hopefully my comments have helped you.

The Forgotten - October 5, 2012, 6:17 pm

The text displayed looks similar to mine..

looloo1 - October 5, 2012, 9:18 pm

It seems like a pretty generic deface page... 'Leet haxor text', matrix background, a console slowly displaying 'Lol haking you, success. Injecting leet hax, success' and over dramatic music in the background

This was my very first deface page and I worked on it for about 45-60 minutes.

Worked on it for about 45-60 min huh? But just copied & pasted off Sw1x tutorial on, "How to make a deface page". It looks exactly like his. Why lie, when the sources are open to everyone. ?

No I actually made it myself and took he's picture.

soeasy - October 6, 2012, 1:27 pm

All the deface pages are almost the same.

Green text some javascript code."Try to connect...successful....blah blah"

MeowMoherowy - October 6, 2012, 2:34 pm

cool :) how did you made it? because i need deface page ;o

w0rm. - October 6, 2012, 3:24 pm

damn man they busted you, whatever..

llich - October 6, 2012, 8:48 pm

If you're going to destroy somebody's website, you better have a damn good reason for it, otherwise, you would be a very horrible person.

I was a webdesigner and SEO.

Guy, you can't imagine how much damade you did.

SEO is a pain in the ass !
Believe me !

I found a lot of admin's password, but NEVER touch to anything.
Found a lot of dork.. and a lot of damage and destruction.
WHY ?
Guys you make injection, took pass or cc, OK !
But why destroying ?!!!

And like Illuminexus said, if you want to destroy, you must "have a damn good reason for it".

If you destroyed the website for no reason, the webdesigner, the SEO guy must suffer.

Inspect - October 6, 2012, 8:49 pm

This is pretty good. I wish you luck on whatever you'll be using it for.

Yeah I thought I recognized it. ?

MANiiMAi - October 7, 2012, 5:46 am

As I said, not all code is from me, and I didn't talk about pictures when I said CODE. So if you only look at the pictures and say it's not mine you can GTFO. About the reason I would have for defacing a website: I deface all the websites I can because they have bad security. I think everyone should step up their security because hackers like me can easily get in :)

-Etern1ty- - October 7, 2012, 6:13 am

Yeah man looking good simple but effective

Pioneer - October 7, 2012, 6:16 am

Honestly I didn't like it at all, looks like all other "1337" deface pages with way too many effects.
Sorry, not my taste at all, seen before.

ijswatch - October 7, 2012, 6:16 am

1/10, I really hate people putting in things like
'connectin to db.. succes'
'secure ur website'
'contact me here'
