Thread: [\[Tutorial\] How to change your IP address in less than a minute \[Tutorial\]](#)

Sigma - October 5, 2012, 7:06 pm

How To: Change Your Ip In Less Than 1 Minute

1. Click on "Start" in the bottom left hand corner of screen
2. Click on "Run"
3. Type in "command" and hit ok

You should now be at an MSDOS prompt screen.

4. Type "ipconfig /release" just like that, and hit "enter"
5. Type "exit" and leave the prompt
6. Right-click on "Network Places" or "My Network Places" on your desktop.
7. Click on "properties"

You should now be on a screen with something titled "Local Area Connection", or something close to that, and, if you have a network hooked up, all of your other networks.

8. Right click on "Local Area Connection" and click "properties"
9. Double-click on the "Internet Protocol (TCP/IP)" from the list under the "General" tab
10. Click on "Use the following IP address" under the "General" tab
11. Create an IP address (It doesn't matter what it is. I just type 1 and 2 until i fill the area up).
12. Press "Tab" and it should automatically fill in the "Subnet Mask" section with default numbers.
13. Hit the "Ok" button here
14. Hit the "Ok" button again

You should now be back to the "Local Area Connection" screen.

15. Right-click back on "Local Area Connection" and go to properties again.
16. Go back to the "TCP/IP" settings
17. This time, select "Obtain an IP address automatically"
18. Hit "Ok"
19. Hit "Ok" again
20. You now have a new IP address

With a little practice, you can easily get this process down to 15 seconds.

P.S:

This only changes your dynamic IP address, not your ISP/IP address. If you plan on hacking a website with this trick be extremely careful, because if they try a little, they can trace it back

Albus Percival Dumbledore - October 5, 2012, 7:07 pm

whats the point to change ur dynamic ip? Sorry but i dont understand the reason to do this?

dosghost - October 5, 2012, 7:56 pm

only works if your not on a router most people use routers now a days with dsl you can change your ip just by changing one letter in your email address like someone@mabell.com to

Someone@mabell.com and it would change the dsl ip :) instantly i made a program that would change the letter every 25 minuets in the modem. but yeah this is old outdated and pointless but thank you for your contribution to the forum.

Psyman - October 5, 2012, 7:57 pm

This rarely works in 2012. This would be a good tutorial in 2003, but nice try none-the-less.

secret4582 - October 5, 2012, 8:26 pm

This is only applicable in certain situation, like residential direct connect access.

nozonner - October 5, 2012, 8:54 pm

this is amazing would this work if i get banned ip banned

Sigma - October 6, 2012, 7:20 am

Yea I was just trying to be nice and give a quick share :)

Fresh - October 6, 2012, 7:20 am

nice tut op, very HQ just like yourself

Swixtor32 - October 6, 2012, 8:09 am

Nice, I have always been getting Dossed by these stupid fucking kids. Thank you so much.

Jethro™ - October 6, 2012, 11:12 am

Nice, Great tutorial should help out a lot of people.

xipsord - October 6, 2012, 11:38 am

I really want this, great tutorial. thanks and bye

R3DH4nD - October 6, 2012, 12:57 pm

good try to make a quick ip changing method... :)

Decent - October 6, 2012, 4:03 pm

First of all, you need to explain the steps a little better for people who don't know what they're doing, there is no such thing as RUN>COMMAND, you have to type in cmd. Also, this doesn't work. Not for me at least.

kokio - October 6, 2012, 4:12 pm

Doesn't Seem to be useful anymore :O not that i know anything...

But thanx anyway ^.^

Five Finger Death Punch - October 6, 2012, 4:58 pm

This is a very nice tutorial, I added it to a list of tutorials.

Superior1 - October 6, 2012, 5:03 pm

HQ member, but LQ post.. thanks for the share anyway

chaosdanky - October 6, 2012, 7:28 pm

I really don't know what's the use of changing your private IP address since you only have one unique public IP address. But this kind of task is easier with this:

go to cmd, then type:
ipconfig /release

ipconfig /renew

you can also mess up with other people by typing ipconfig /release on their laptop to disconnect them from the internet.

Sigma - October 8, 2012, 5:57 pm

Just a quick guide that's all, it's only for members that want to do it. Stop questioning this thread its for members that need this tutorial. And how is this LQ its a tutorial I am posting?

nickebre - December 23, 2013, 4:04 pm

Thank you for a great tutorial, now i dont have to get DDoSed anymore!

Thanks a lot!

/Jigsaw/ - December 23, 2013, 5:29 pm

Thanks a lot!

Why are you grave digging? And if you read the comments it won't work anymore on most routers. So you're stilling going to be DDoS'd. If you need to stop it just reset your router. ???

xXAnonymousQcXx - December 23, 2013, 5:38 pm

Nice, I have always been getting Dossed by these stupid fucking kids

warlock994007 - December 24, 2013, 8:02 am

It wont work, it just buffer the virtual address and not the real one..If you want to change your IP address initially change your mac address.

Colah - December 26, 2013, 12:00 am

Wink Emoticon - January 2, 2014, 10:10 pm

I called At&t and they wouldn't allow me to change my Ip.

kelyo98 - January 4, 2014, 8:47 pm

Only changed in LAN not wan .but nice tut
