Welcome to my thread about iRtehStealer. Before you begin reading please note the following:
Other competing Stealer's/Keylogger may use drops. This is when an .exe is dropped from the server, ran in the victims temp folder, passes are written to the temp folder, and then your server reads the passes and sends them to you.

Question: Is using drops really FUD?

Answer: NO, and drops will never be Runtime FUD. - If the software is using drops and you are told it is Runtime and Scantime 100% FUD you are simply being lied to, so remember, you get what you pay for HackForums.

[+] iRtehStealer = No Drops!!Important - Pure Code for MAXIMUM Runtime FUD

So ask yourself this before going to purchase other software :
"Do I want a keylogger & stealer that isn't and never will be Runtime FUD? Or do I want 1 that uses pure code? Well if you want the 1 that uses pure code and doesn't need 3rd party app's to get the job done - YOU HAVE COME TO THE RIGHT PLACE!

Just purchased it , Absolutely fucking great :D (You thought I was going to say amazing then..)

It takes a while to send logs (around 4mins) if you steal data.db but it got the job done :)

Overall 10/10 love it.

The thing works great both the keylogger and stealer, I recieved logs of information for both, and tons of them.

I would suggest this to ANYONE who is even considering it, works great, looks great, affordable I mean it doesn't get any better and he is an all around cool guy.

Test email before using, make sure you have .net framework, and you are fine! You are entitled to full support because you bought unlimited updates, this can be done via Teamviewer, MSN me.

ProcyoN - March 11, 2010, 1:05 pm

There's an issue people should be aware..

GMail often blocks incoming emails due to flood (I guess, because I stop receiving logs in specific time periods during the day), so set the sending log interval to ~25-30 minutes.. Its not iRtehStealer's fault, its Gmail's..

And a tip to next update must be the about empty logs, 70% of the logs I receive are empty and just contribute to this block.

Overall its a great software and I recommend you buy it now

Yeah I guess they are empty because the victim is AFK on their computer, I will update this so that if they go AFK it wont send logs. :)

I bought this yesterday and it's a very good tool. Just a couple of suggestions:

- Make the emails a bit less verbose, i mean, for cd-keys on registry it should only send the product name when it finds a key not all the product names with empty keys, so we dont need so scroll down all the mail page :) It also would help us when using the gmail search function so we can know how many keys does we have, for example for COD4.

- Remove the steam cookie so users have to log in again. I have seen some keylogged people using steam but in the keylogs it seems that they didnt prompted for user/password.

- Add the control, alt, caps and direction keys to the key logs so we know when the user is using @, for example.

And thats all, thaks for this great tool!

Hey, just wondering, does this save any file anywhere when run on the victim? I'm trying to gain the trust of a friend I hacked, I already have the necessary password from him, and I want to show him I can get the "virus" off. Just curious.

First of all this is a great stealer and you give great support, but I would like to make some suggestions:

- 1: Steal IE passwords also (many people still use that browser)
- 2: Only send logs with some info (so no empty logs which fills your inbox)
- 3: Steam stealer

Loving the new version 3.5, now all you really need to do in my opinion is to upgrade the FTP side of things, Just like Istealer has, have a professional and easy to use user interface, where all the logs get sent too. that would actually be beastly. Also say if you have Keylogger turned on, instead of spamming it with all the passwords, you have to click the PC name or something, and it will take you to there ever-growing key logs.

Imo, i think thats quite a good idea.. i'd love to see something like that in your next few releases.

Best Regards,

Hey, just a suggestion for for screenshots, make it optional, since they can be pretty big depending on the screen size and quality. Also, make us able to choose more then 1 sending option, like gmail+FTP or gmail+custom email or FTP+custom email, just in case the one we are currently using doesn't work. Just an idea

MrIncredible6 - March 19, 2010, 3:43 am

If you have BindStub.exe in your folder you are fine, the NOT LOADED is showing even though it is loaded small bug. Also, you cant run multiple servers 1 after another, after the first 1 you cant run

another.

a couple questions

will this steal runescape, and steam accounts?

and can you have remote desktop, or is it only a stealer?

also, can you spread through youtube easily?

i might purchase this instead of a crypter because this crypts the server too, right? its FUD runtime/scantime?

yes

only stealer, not a RAT

yes, fake program+binded with server+youtube video = win

yes

I love version 3.5! FTP works really good. Just some suggestions ? :

- could you make the infected machines create a new folder, one for each machine/user being the name of the folder the same as the infected machine or machine user (plus a random to avoid collisions sure.)

- Also i suggested it some time ago but is annoying to get a report full of empty cd-keys names :(could you make it so its only sent the captured cd-keys names? Or if this is not possible just add something like "FOUND!" after the cd-key name and before the cd-key (serial). That way we could easily find stolen cd-keys by name with, for example:

Code grep 'Orange Box : FOUND!' *.txtor something similar in windows

- And a question/suggestion: Does the program prevent the itself from being executed more than one time on each machine? When you are running it on your botnet you need to download/run it more than one time on different hours for all your bots to execute it so a bunch of them will execute it more than one time.

- And last one, i promise ? : Could you add on each version of the program an 'old version killer'? This way you wont get for example version 3.4 and 3.5 running on the same bot.

Thats all, again thanks for this awesome soft, i hope u sell it like candies and make u rich xD

iRtehLeet™ - March 21, 2010, 8:48 pm

I love version 3.5! FTP works really good. Just some suggestions ? :

- could you make the infected machines create a new folder, one for each machine/user being the name of the folder the same as the infected machine or machine user (plus a random to avoid collisions sure.)

*Being worked on, look out for it in 3.6 :)

- Also i suggested it some time ago but is annoying to get a report full of empty cd-keys names :(could you make it so its only sent the captured cd-keys names? Or if this is not possible just add something like "FOUND!" after the cd-key name and before the cd-key (serial). That way we could easily find stolen cd-keys by name with, for example:

Code grep 'Orange Box : FOUND!' *.txtor something similar in windows

*It will be extremely hard to do this. A possibility would be "FOUND", which I will see what I can do.

- And a question/suggestion: Does the program prevent the itself from being executed more than one time on each machine? When you are running it on your botnet you need to download/run it more than one time on different hours for all your bots to execute it so a bunch of them will execute it more than one time.

*The program does currently prevent itself from being executed (duplicate) logs on the victim. However if they have rebooted and you haven't added to startup then it WILL execute again. (If you selected add to startup then alright.)

- And last one, i promise ? : Could you add on each version of the program an 'old version killer'? This way you wont get for example version 3.4 and 3.5 running on the same bot.

*Seem's like an excellent idea, however if you add the 3.5 to startup it will take 3.4's spot. I could

also improve this and add an actual option to cure older versions upon execution. Thanks.

Thats all, again thanks for this awesome soft, i hope u sell it like candies and make u rich xD

*Thanks ?

The only problem with this stealer is , u loose atleast 50% of you're victim's,
What I mean is that most people use IE instead of firefox.
So atleast 50% of my logs are from people that uses IE, So those logs are usseles.

Could u not add an IE stealer for 3.6 version, I Think this is the most important thing to add first.

What I mean is that most people use IE instead of firefox.
So atleast 50% of my logs are from people that uses IE, So those logs are usseles.

Could u not add an IE stealer for 3.6 version, I Think this is the most important thing to add first.
Yeah I've been told this 100 times. ?

Yep, it sends to G-Mail

I have a 3-day weekend, so I think I will start working on this more.

Great product, got my first real log today (I'm REALLY slow) and it was really clear.

Very nice stealer, I was one of his first customers .. only thing is, if you don't know how to use it. Don't expect proper support, as far as I see .. he is a complete asshole. He has anger issues, and he answers you in a very rude way when you ask a question. I like the stealer, its great .. but he isn't a good person after he gets his money.

is it just me or is the stealer not in the 3.6.1 rar file?

I just get the bind stub, stub, pumper, cure, and the text files

kamelreiter - March 31, 2010, 2:46 am

bought it and it is !!!aweasom!!!!

Very legit guy (everything worked fine and fast)

Stealer and Keylogger in one programm=aweasom

btw:I am searching for a good spreading way.

Cheers!

Recommended product and seller. Thanks iRtehLeet! Quick and easy transaction, helpful support, program works exactly as advertised.

One suggestion though, when binding files, the output file (iRtehBinded.exe) will overwrite a file of the same name if it exists. Could you please add a confirmation prompt for overwriting and/or a prompt to ask what name you want it saved as?

Awesome. Pure codes? Just amazing. This stealer is great because it doesn't use drops - unlike all the other stealers in the sellers section.

I hate all the other stealers, because they drop "firepass.exe". Firepass.exe is detected by basically EVERY AntiVirus - Including the shitty ones such as mcafee. It sucks ass. But this one uses pure code =)

Says a great customer ^^ ?

.illogical - April 12, 2010, 8:40 pm

I have personally watched the development of iRtehStealer since its developmental stages. I am not surprised it is still going strong. The unique thing about this keylogger/stealer is its already FUD, you save alot of money from purchasing crypters and stubs.

I have also witnessed iRtehLeet's coding skills first hand, he has a vast bank of knowledge for coding languages. Very surprised over TeamViewer session watching him code. I am sure that this project will continue growing, and all members who purchased lifetime updates, got a great deal. Completely vouch for this member.

I still highly recommend this to anyone who is looking for a cost effective and actually WORKING stealer for prospective customers. Other stealers and keyloggers you find in the market place are either detected, or will be detected in very short time, so the infection rate is low, but with iRtehStealer its FUD and can infect at a higher success rate.
Good Luck on sales.

At first, the program got error when we run it... He patiently assist me to resolve what is the cause of the problem. And we then finally found out that my ISP has blocked something from it.

The problem is not on his stealer, but guess what, he amazingly can solve it so I can use his great program!

Excellent attitude, excellent support, and honest coder. Believe me, you wont disappointed by him :)

As I said in previous post, binder stub went 4/21 overnight, which was fudded almost 24 hours ago, just haven't released update yet til I tweak something, and your server working then not working seems like a Gmail or DriveHQ ban and/or freeze to me, totally out of my reach.

Common sense isn't so common is it???

They aren't typing in the web browser, or the web browser was left open and they went AFK.

The stealer now needs .net framework 2.0.5 which is the lowest dependency it can get to. Bind your

file to avoid the "File is possibly binded with malware" detection.

What's the changelog for 3.8?

fyou - April 19, 2010, 1:53 pm
Wow this stealer is amazing in so many ways this belongs on first page.

FML - April 19, 2010, 2:23 pm
Whats in the new update?

iRtehLeet™ - April 19, 2010, 4:48 pm
Please everyone stop asking whats in the new update! If it wasnt mentioned in the changelog then its not important!

brownie912 - April 19, 2010, 9:07 pm
Bump for teh awesome stealer. Looks like avira is detecting it, i just made some new files with 3.8 and both of them were detected when i scanned.
I changed the icon to a java icon.

just back from another city, when i come back i noticed this latest update..
cool update bro :) tested.. very good :)

Although i should use the old stealer because of my stupid ISP lol

datgamur - April 20, 2010, 8:24 am

How much to update from 3.5 to 3.8?

iRtehLeet™ - April 20, 2010, 8:39 am

Hmm.. Avira

You must have an Avira tagged icon or something, I dont know. Maybe the file your binding with is detected. ?

Go to the hacking tutorials section and look for any threads with:

Torrent Spreading
Java Drive-By
Youtube spreading
and any form of spreading in general.

Use them to help you.

Try different iconsAha i just built one without changing the icon and its clean, but it does say its possibly binded with malware, i guess my icon was making it come up with a red flag, where can i get new icons that wont make it come up as possitive?

One more question. Let's say I bind a keylogger to a setup file, will the setup file become corrupt and not work, or will the person still be able to install his program without knowing my server installed itself?

Thanks!

Their password has a unique, secure and unknown character or symbol that your computer does not recognize. Just copy and then paste the password. Good luck - iRtehStealer is ftw!

Can you give me a link to the cure.exe?

I kinda infected myself and it won't show my msn contact list ^^

Drop - April 23, 2010, 11:11 am

I bought keylogger.. So the true is not so good as iRtehLeet say. Soooo buggyyyyyyy!!! Keylogger doesn't work, only stealer works okay. Data.db - it only works if you use Gmail if you use FTP it doesn't work. ALSO!!! I don't know why but when I try my keylogger/stealer on my self. I get .NET error!!! It say something about unsecured upload and shows Continue or Quit.

Keylogged 7 people - only 4 is sending keylogger logs all other's doesn't work. Kind of shitty dude :)

-Darkness- - April 23, 2010, 11:45 am

I believe he is still working on fixing shit.
