Thread: [Help didnt auto take me to shell?](#)

Lime Whips - October 13, 2012, 11:29 am

ok so I uploaded a shell and changed it to .php with live http replay but it didnt auto take me to the shell how do I find it now?

CamIce - October 13, 2012, 11:35 am

IT depends. Try to find it in the folder with the uploader, like for eksample you found a uploader on a page in folder img eg. site.com/img/uploadersite

Try to change "uploadersite" to name of your shell.

If you want, you can pm me the site and name of your shell while uploading. I can try to find it

Lime Whips - October 13, 2012, 11:39 am

I pmed you with the link to the website and the shell name

You can PM me too.

Along with the admin info :D

Okay,that will do but then it is hard to find where it is uploaded since it can be anywhere.

Or it can be sent to the admin mail and then admin must approve it first. :)
