Thread: [\[PREVIEW\] Spoof Me SmS - WEBAPP \[HF#1 SMS SPOOFER\]\[SPOOFING SMS\]](#)

Gr0wlit - October 14, 2012, 2:24 pm

Hi all, this is only a preview, just to know what do you think and what i can add/remove.

I'm the creator of "Spoof Me SmS", an already developed application for Windows that allow you to spoof sms.

My thread: <https://hackforums.net/showthread.php?tid=2859846>

GOING TO WEBAPP

The limitation is that not all can access to that application, so i've made an online application that allow users to do the same with all the platforms.

You can see a preview Here: => <http://gr0wlit.com/WebSmS/webapp.html>

Here you can see a preview:

I'm also developing an API, for developers who want to integrate an sms function to their softwares.

So, what do you think about it? Add/remove something? Suggestion? It can be helpful?

the web one is glitched for me :S

VooDi.

Cozyman - October 14, 2012, 2:34 pm

Looks nice if you ask me.

Is this going to be free?

are you goin to add more feature to the project when you said (add) or just for the design. Because the design is all fine ^_^

MrSaix - October 28, 2012, 7:27 pm

Looks great! can't wait to try it out

Nitrox - October 29, 2012, 2:19 am

This looks great! I will definitely be buying it once it completes. :)

mullinupp - November 12, 2012, 10:37 am

Is it possible to make it able to send picture like you can do with your own phone ?

man you can't really see it's a 2012 thread ?

g00dhum0r - October 27, 2022, 9:11 pm

I actually clicked the links before I realized its from 2012. ugh

SLum-g0d - October 29, 2022, 5:34 pm

its a simple mistake. my bad. no reason to call me out like that

mocxlb0r - November 1, 2022, 3:50 am

Omg shot it very nice papapap

Ty for this I really like this
