Thread: [Emissary NET 1.0+ Setup Tutorial + Help Desk](#)

Coding4Noobs - October 14, 2012, 5:16 pm

This tutorial is also included in the 1.0.4 release coming soon in the tutorials folder.

If you have any questions about Emissary NET you can post here or open a ticket (pre or post sales) here.

www.emissarysolutions.org/Tickets

Also please note i will be creating a video tutorial soon containing more in depth explanations and a ebook which will have full definitions feature lists etc.

I'm having trouble with allowing the server to install on someone's computer. I click enable startup, and I call my file test.exe. I want it to install to AppData, and I'm not sure what the registry value should be, but the server never shows up in AppData when I run my server on myself. Tips?

MyLittlePony - October 14, 2012, 9:54 pm

Very good and nice guide man.

Good job.

Hard to read some text though.

Coding4Noobs - October 15, 2012, 5:11 am

It always installs to appdata, your folder options allow you to choose a new folder name within the appdata.

Please make sure when using startup settings, you fill out ever field.

The registry value is the name that will show up in your clients startup.

`Ninja - October 17, 2012, 1:48 pm

Just a suggestions:

You should make a trial version so you only get a certain amount of commands, Limit of slaves like

5 - 10 slaves and shit.

Also. The gui looks very good, Looks very simple to setup aswell.

jaypitt20 - October 17, 2012, 4:42 pm

Do you have a crypter that you can vouch for that works well with Emissary?

(Oct 17, 2012 04:42 PM)jaypitt20 Wrote: [\[CITE\]](#) Do you have a crypter that you can vouch for that works well with Emissary?

Or does anyone on the forum ? I'm willing to buy a good one but just want to be sure of compatibility and long FUD

Emissary Protector, and Chronic and Data protector all work.

Dark_Noodles - October 19, 2012, 1:47 pm

Awesome work man. Alot of people will appreciate it!

prodigyhf - October 19, 2012, 1:47 pm

Very nice job on this thread man. Keep it up!

Conlaoch - October 19, 2012, 1:50 pm

Great clean tutorial! Another nicely done job by my brotha Coding4Noobs

Rage™ - October 19, 2012, 2:00 pm

Great tutorial. Nice job on these Coding4Noobs. ?

Drug ballad - October 19, 2012, 2:01 pm

whas mah tutorial not good enught for ya xD

nice tut bro love the rat BTW
VOUCH

didnt even know you made one ^.^ sorry

Mewble - October 21, 2012, 9:25 am

Hey, after the update, I do not have any of my connections..I am listening to the same ports and my DNS on still online and the same as it was on the previous version. Any idea what I'm doing wrong? Thanks

Coding4Noobs - October 21, 2012, 9:27 am

In the update we didnt change any part of the connection or network encryption. Check your DNS make sure its forwarded right and still enabled. If your using no-ip they disable your no-ip after a while.

Zwift - October 21, 2012, 10:07 am

I would absolutely love this! Thanks sooo much!

Mewble - October 21, 2012, 7:31 pm

New version will not work for me. Connecting fine on the old one, but the new version will NOT give me any new connections..

Coding4Noobs - October 21, 2012, 8:03 pm

By old version, which are you refering too? 0.48 or 1.03?

Mewble - October 22, 2012, 2:39 pm

My old version is version 1.03, and I am updating to version 1.04

Coding4Noobs - October 22, 2012, 2:49 pm

Okay, pm your teamviewer ill help you fix it.

\$ zS \$ - October 28, 2012, 8:07 pm

Hey, I'm having trouble receiving any external connection, localhost connects but anything else doesn't even though my ports are opened locally and through a VPN.

Tried DarkComet with the same settings and it works.

Coding4Noobs - October 28, 2012, 10:03 pm
