Microsoft Office Word [.docx] Infector C# Source Code
[Video: <http://www.youtube.com/watch?v=VngyVvZA0tQ>]
HQ <http://www.youtube.com/watch?v=VngyVvZA0tQ>
This program infects created docx files by Microsoft Word
Automatically , I really put time to think and make the idea.

Features:

Infects .docx files
Microsoft word Icon

PM and post
Post and pm me please i dont want people to leach this
I'm giving this only to 6 first members who will PM me

Birds - October 15, 2012, 6:36 pm

I guess I'll take a look at this.

Thank you!

Pentagon - October 15, 2012, 7:12 pm

I will gladly test this out too, thanks.

BaussHacker - October 15, 2012, 7:21 pm

Does it replaced already existing word documents with your executable and then switches the icon?

Also if that's it make sure there is someway to turn the "Hide full name for known extensions" or whatever on from the system, because some people (Like me) has the full name of the file displayed.

Debroski - October 15, 2012, 7:24 pm

I would love to test this , thanks!

What are you talking about "it already existing word documents"?/?/ noo
it will infect any created docx files on that system no Matter of the Name Size or time ,

BaussHacker - October 15, 2012, 7:35 pm

it will infect any created docx files on that system no Matter of the Name Size or time , Which is what I asked about lol.

So what is your method of it? I can think of two.

What I said (Replacing them with your executable and changing extension.)

Or

Using a shell to make those files open your program.

Coding4Noobs - October 15, 2012, 8:06 pm

it will infect any created docx files on that system no Matter of the Name Size or time , hes asking if your using an exploit or if you are just changing the file and trying to spoof it on a system.

Spoofing is not very effective because people like me and baus have full file names and paths displayed showing us the spoof...

bartjuh10 - October 16, 2012, 4:05 am

Looks interesting, sent you a PM. Not opening any exe you send me though.

hackpet - October 16, 2012, 8:24 am

If i saw well he makes an executable change icon, and the executable open the original word document too. Great job anyway, but if sb watch the .exe at the end of the file, thats bad.

KingCobraXD - October 16, 2012, 9:33 am

Let me guess, using the FileSystemWatcher to watch for *.docx files being saved onto the hard drive and then replacing them with your server?

Birds - October 16, 2012, 7:46 pm

Yeah something like that. When I saw it I just face palmed and deleted it.

gungunfebrianza - November 25, 2012, 3:05 pm

i am interesting with your malware sir,
could you send it to me>?

ytlayol - November 25, 2012, 9:11 pm

Would love to check it...pming u...

jessman420 - January 11, 2013, 8:38 am

Can you send me the source, looks interesting.

Not2EXceL - January 11, 2013, 9:13 am

Hey man could I get this source? Looks awesome.

kobilica - *January 11, 2013, 10:04 am*

Sent you sexy PM and thanks for your effort, I hope it is good stuff! :D

jessman420 - *May 31, 2013, 5:52 am*

I am curious about this pming you now.

OxyNeeDs - *June 7, 2013, 8:56 am*

ho ... dude i wont this ;)

PM sent
