Thread: [Twitter Mass Unfollow \(reverse the Mass Follower script\)](#)

salventura - October 17, 2012, 7:22 pm

I have a script where you can load your username:pass list of all your twitter accounts and then put in the account that you wish for all of the users to follow.

Is there a way to reverse that script? I need a script, where I can load my username:pass list and put in the account so all the users will unfollow that user.

Any help would be appreciate.

Linux. - October 17, 2012, 7:23 pm

I can reverse it PM with the script, and I will do it gladly.

I tired no success. Sorry, again. I may keep trying.

salventura - October 17, 2012, 7:41 pm

No problem Crypto, I still appreciate you taking the time to look at it.

If anybody else has any ideas or thoughts please let me know.

Vlad1k - October 17, 2012, 8:10 pm

I can do it for you. PM me the script.

Thank you for your time Vlad1k, I pm'd all the info to you.

ComponY - October 17, 2012, 8:22 pm

I would like to get this script as well! Let me know if I can get it once it's done for you!

Kabyle - October 18, 2012, 4:28 am

PHP Code

```
<?php
    set_time_limit(false);
    error_reporting(false);
    if (isset($_POST["perfis"])) {
    $logins = explode("\n", $_POST["perfis"]);
    $follow = $_POST["follow"];
    $scontar = count($logins);
```

```

for($i = 0; $i <= $contar; $i++) {
    if (!(preg_match("/[a-zA-Z0-9]+/i", $logins[$i]))) {
        continue;
    }
    $data = explode(":", $logins[$i]);
    if ($data[0][0] == "@")
    $data[0] = str_replace("@", "", $data[0]);
    $ch = curl_init();
    curl_setopt_array($ch,
    array(
        CURLOPT_URL => "http://api.twitter.com/1/friendships/create/{$follow}.xml",
        CURLOPT_RETURNTRANSFER => 1,
        CURLOPT_SSL_VERIFYPEER => 0,
        CURLOPT_COOKIE => null,
        CURLOPT_HEADER => true,
        CURLOPT_NOBODY => false,
        CURLOPT_POSTFIELDS => "&follow=true",
        CURLOPT_USERPWD => trim($data[0]) . ":" . trim($data[1])
    )
    );

    $ret = curl_exec($ch);
    if (preg_match("/Unauthorized/i", $ret)) {
        print "<b><font style='color: red;'>". $data[0]. " - Error</font></b><br />";
        flush();
        ob_flush();
        sleep(1);
    } else {
        print "<b><font style='color: green;'>". $data[0]. " - Success</font></b><br />";
        //include("../loop.php");include("config.php");
        flush();
        ob_flush();
        sleep(1);
    }
}
}
}

```

?>

Is it this one?

Yes that is the one to follow, I need to make that unfollow. I've tried changing various lines in the script but have not had no luck.

Linux. - October 18, 2012, 12:47 pm

I think you need to change the twitter api usage, not so much the code but the functions being used.

salventura - October 18, 2012, 1:01 pm

Code CURLOPT_URL => "http://api.twitter.com/1/friendships/create/{\$follow}.xml",
I believe to unfollow the line should read

Code CURLOPT_URL => "http://api.twitter.com/1/friendships/destroy
but I'm not sure what else follows.

I've tried changing different lines that read follow to unfollow, etc.. Spent a few hours on it, until my head started to hurt. I only half way know what I'm doing... lol

If I knew more about what I was doing I'm pretty sure it could be made in a short amount of time.

One moment, I think I know how to fix it :D I will change the function.

Here I found the link for it, this should work.

<https://dev.twitter.com/docs/api/1/post/friendships/destroy>

I will write some code for it one moment.

Try this code and tell me if it works or not if it does then great.

PHP Code

```
<?php
CURLOPT_URL => "http://api.twitter.com/1/friendships/destroy/{$_follow}.xml",
```

Just changing that line did not work, I tried changing that line by itself, as well as changing it to that, and changing some of the other lines with it. No luck as of yet. Once again I appreciate your time.
