Thread: [How to make your copy of Windows XP Genuine without any CRACKS or KEYGENS](#)

xlllxlll - October 19, 2012, 9:24 am

This is a guide on how to make your copy of Windows XP genuine without any cracks, keygens etc.

1. Click on "Start"
2. Click on "Run"
3. In the blank box, type in "Regedit" and click OK
4. When a window opens, you will see a tab that says "HKEY_LOCAL_MACHINE", expand that tab
5. Once you expand that tab, you will see another tab that says "Software", expand that tab
6. Once you expand that tab, you will see another tab that says "Microsoft", expand that tab
7. Once you expand that tab, you will see another tab that says "Windows NT", expand that tab.
8. Once you expand that tab, you will see another tab that says "CurrentVersion", expand that tab.
9. Once you expand that tab, you will see another tab that says "WPAEvents", double click on that tab.
10. Once you double click on "WPAEvents", you will see a file that is named "OOBETimer".
11. Double click on "OOBETimer" and a new window should open, when that window opens, delete all the characters you see (It will be a very strange code consisting of number, letters and strange symbols). Make sure that you HIGHLIGHT all the characters, and then delete them. When you have finished deleting the characters, the only ones remaining should be "0000".
12. Once you have done that, click OK and close everything.
13. Now again, go on "Start" and click on "Run".
14. This time, type this in "%systemroot%\system32\oobe\msoobe.exe /a".
15. A new window with the title "Let's activate Windows" should open.
16. You should see three options when that window opens, select the one that says "Yes, I want to telephone a customer service representative to activate Windows", and click "Next".
17. Once you do that, it will be say "Generating New Installation ID", and then another page should open up.

18. On the bottom of the new page that opens, you should see a button that says "Change Prodcut Key", click on that.

19. Now it will take you to a new page, and you will see 5 blank boxes, fill those boxes up with this key "THMPV-77D6F-94376-8HGKG-VRDRQ".

20, Make sure you have copied the key CORRECTLY, once you have done this, click on "Update".

21. Once you have done this, it should say "Generating New Installation ID" and take you back to the previous page.

22. This time just click on "Remind Me Later".

23. Now restart your computer, and you're done, your copy of Windows XP should now be genuine.

Yeah this is good method but still i will recommend patch since its easy that way.

Thank for the tut:D
