Thread: [Polymorphic Crypter](#)

Maple ?? - October 21, 2012, 10:52 am

Do you think one of these would sell? Because if it wont then I wont invest in a coder and such, as it would cost a lot but if people are interested then I might invest into one. So the question is would this sell here or no because of the large amount of Crypters. ?

Maple ?? - October 21, 2012, 10:55 am

(Oct 21, 2012 10:54 AM)mr_mustache Wrote: [\[CITE\]](#) What would get you much further is a polymorphic RAT/key logger. Those wouldn't need to be encrypted, and if you also add a spreading method it would basically float around the internet for MONTHS.

But why hire a coder and not just learn yourself?

Well a Crypter would be able to work with all different types of products.

Baked - October 21, 2012, 11:00 am

You can tell you don't know much about this subject.

Maple ?? - October 21, 2012, 11:08 am

(Oct 21, 2012 11:00 AM)Baked Wrote: [\[CITE\]](#) You can tell you don't know much about this subject. I may not, but it's not like this product is going to come out tomorrow, it will take time and money and I am ready to invest both of those.

?Cooldude? - October 21, 2012, 11:09 am

If you knew what polymorphic meant you would be able to see that a polymorphic crypter would be highly desirable here. Don't just throw buzzwords you don't understand about.

Maple ?? - October 21, 2012, 11:12 am

I know what a Polymorphic crypter means and why it is different and better. The reason I'm asking is because it would not be sold for \$20 or \$30 like most crypters are here and was wondering if there would be people that have the budget to purchase such a product. Thank you.

Baked - October 21, 2012, 11:21 am

Please explain your definition of it.

I highly doubt you understand it completely or you don't realize how hard it would be to code.

This is the best I can explain it using 100% of what I know.

Basically it changes the values in the coding and outputs a different stub(.exe) each time which makes it much harder for an AV to detect the file as malware.

Sorry if I didn't include something, and yes I know it is very hard to code. ?

That's .NET Polymorphism.

Which isn't true poly, it's more just randomizing the stubs strings which can make it 99% different, but will never get 100%

100% is polymorphism.

Thank you for the information, I appreciated it. Also do you think here is a demand for such a product?

Doubt any of the folks on here can afford a polymorphic crypter. All the guys around here basically want a crypter for \$5 lifetime, that's FUD for a year and works for their little virus.

But there might as well be people around here that can afford one.

Now my question to you, for how much do you think such a crypter would sell? And how much do you pay your coder to make it?

Maple ?? - October 21, 2012, 11:53 am

I would be selling for at least \$80.

a true polymorphic crypter would sell for atleast 1k..

Maple ?? - October 21, 2012, 12:02 pm

(Oct 21, 2012 12:01 PM)draghorne Wrote: [\[CITE\]](#) a true polymorphic crypter would sell for atleast 1k..

This is the minimum and would only be a month or less.

draghorne - October 21, 2012, 12:04 pm

im going to be honest.

i have never personally used a polymorphic crypter, but i know a few people that have, i know that they spent around about 2k for it.

Ya that is why I'm asking if this is the right place to sell one and if there is a demand here.

(Oct 21, 2012 12:04 PM)MAM-2201 Wrote: [\[CITE\]](#) tzzz, do you realize a polymorphic crypter is ways more worth :(

sell a a poly. crypter for 80 \$ at least you would have enough customer, even when they would just try crack your crypter and sell it somewhere else for x10 more ;)

It's not \$80 lifetime, it's less than a month and that is the MIN.

It's not \$80 lifetime, it's less than a month and that is the MIN.Are you stupid?
All this time here and you don't know that these people are all 15 year olds playing xbox live begging mommy for money?

Maple ?? - October 21, 2012, 12:07 pm

Are you saying I sell for less? That is not going to happen.

whattheheck - October 21, 2012, 12:13 pm

(Oct 21, 2012 12:07 PM)Maple. Wrote: [\[CITE\]](#) Are you saying I sell for less? That is not going to happen.I am saying either sell it for less and get a bunch of customers OR sell it for more and get few customers.

Selling it for less will net you more money in the end if you wish to sell on hackforums. Selling it for more will bring money in quicker however, long run it's better to sell for less as you will net in more money.

Or you can sell elsewhere.
I highly doubt any coder you know will be able to code it though.
Good luck.

Good luck.

I would much rather sell for high and get a little number of customers, and have longer FUD time.
Also it will be coded no problem with that ?.

wacked3 - October 21, 2012, 12:29 pm

(Oct 21, 2012 11:42 AM)nufc Wrote: [\[CITE\]](#) Now my question to you, for how much do you think such a crypter would sell?I've seen some crypting services going for 1000\$ per Month with one update per day and some for 300\$ per month with unlimited updates (Mostly it is 500 though).

The last polymorphic crypter I've seen sold was for 350\$ (Some here were sold for less than 200\$). IMHO this is too cheap - even if the crypter is polymorph it needs to be updated constantly, which should be reflected in the price

Alhalama - October 21, 2012, 12:42 pm

Well please for gods sake do not sell a polymorphic crypter.

- 1) You suck at marketing, and are overall a bad businessman.
- 2) You don't know shit about coding, let alone about a polymorphic crypter (and your coder won't help you much either, a seller has to know what he's selling. How are you even supposed to give support to your customers /herp)

So your dream to grow rich with selling a polymorphic crypter on here, please get that shit out of your head, you will never succeed.

DeMoNi - October 21, 2012, 12:56 pm

A polymorphic is not simply changing code in the stub when compiling, this is an USG.

Maple ?? - October 21, 2012, 12:59 pm

(Oct 21, 2012 12:28 PM)MAM-2201 Wrote: [\[CITE\]](#) do u actually know what polymorphic means? there is no fud time anymore since it is polymorphic and will change its own code. You go look for a coder and sell your polymorphic crypter for 80 \$.

good luck with ur sales ;)
FUD means its not detected my any AV's so it can be both.

Also, I'm not sayin'I'm a l33t coder and will release this tommorow, just asking if it would sell regardless of the seller.

And if I was to come out with this I would get many well known coders to test it and check of the

coding etc. So that I am providing a HQ working product.
