Thread: [How do i check putty booter output?](#)

T?ny - October 22, 2012, 9:44 pm

so say i have a putty booter that ran on a vps, how would i know its output in mbps or gbps

wwwyzzzerdd - October 22, 2012, 11:52 pm

Theres no such thing as a putty booter.

Wow..ofcourse there is..please dont comment in a sectio. That you know nothing about

Sir Asylum - October 23, 2012, 4:48 am

First of all its called a VPS running the CentOS, with Dos scripts uploaded to it. and to test your output you should hit a dstat server.

aciid - October 23, 2012, 5:27 am

It's any server running dstat.. and putty booters don't exist, putty is an SSH client.

To get an accurate measurement the server running dstat needs more download b/w than your vps with a dos script can upload
