Click on test mail, if its valid then click build.

Spread the server.exe

LukeyTheBoy - March 3, 2010, 11:25 am

what do the Antis and Setup Things do, what to do with interval?

i built the server.exe but cant find it

Startup is so the keylogger starts when the infected computer starts.

Interval in how often you want the logs to come in your gmail.

Thanks for this keylogger mate, but I didn't find a way to change icon for server. How to change icon there is no browse button. And there is a startup check box what is it for ?

When i click on my own server in VPC, my Avira ask this for connect to net and if i deny it, then it doesn't work and show some error, if we send this to victim It would not work if they deny this when it asks for connect to internet. If you set timer for 1 minute then error pop ups again and again after 1 minute saying some exception handling ?

just tested this one on my new vic(female friend and she did not know. now where is the fun in that if she did LOL) so. not low cpu usage. very high just so you know takes all cpu usage.. the log's only says when she's been no passwords or username's has a bug for sure

and the start-up does work. yes but if you want to spred this well you are gonna fail on the stealth part of a keylogger coz the vic can not del the file(server.exe) or whatever you called it. so they

know. means this is not gonna be fud for long.. and BTW he keylog's you now... and there computer will crash slowly.. aka no log's

BAN ME!!!! OR BELIVE ME
sorry for bad english

Using this now, keylogged 2 runescape accounts already.

The Sword - March 13, 2010, 3:33 pm

Why doesn't anybody post the sourcecode?

I think then say couldn't include their own viruses...

Please, if you dont want to make me not to trust you, then post the sourcecode!!

Look at what you wrote.

Your saying that i should release the source code of the keylogger i've been working hard on.

Gtf0 pl0x ?
