Thread: [\[Decrypt\]Please Help me Decrypt the Hash](#)

b001ean - October 27, 2012, 11:10 am

Could not find any details about this hash. Can you please decrypt it?

You don't decrypt them, you crack them.

Look for how to crack MD5 hashes [here](#)

b001ean - October 27, 2012, 11:43 am

Thanks for your help... I should crack it... :)

krislovesholly - October 27, 2012, 12:54 pm

i tried decryting that and no luck so yeah needs cracking

you cannot crack every hash(well actually you can it kinda depends on the pass list , the time you have)

If you wont learn how to do it by yourself , you will keep asking and it wouldnt help you up in the future.

I suggest you to break your head and to not stop until you figure it out.(crack it obviously)

Dyme - October 27, 2012, 5:10 pm

Get hashcat: <http://hashcat.net/>

Get word lists: <http://wordlist.sourceforge.net/>

Good luck!

J?mes - October 27, 2012, 5:37 pm

Where did you get the hash from? If it's from a forum / CMS, it's most likely that it has a salt. If it has a salt, the salt must be provided before you can attempt to crack it or I really doubt you will get very far.

ubuntupunk - December 10, 2013, 6:24 am

Master Key 1:

0xe648d207eb6a457cc3b415e5e6db38759de529051d808b5d34c679c43020a233e6b5161de2e85070127009d61e4c24c8, Salt: 0x09792b4786f368cb. Passphrase hashed 49019 times with method 0 with other parameters 0x

please help me find the password
