Thats cause it is legit lol. Im not sure why the other virus total found virus and it didnt when i scanned it but o well no harm no foul. I hope you guys enjoy this tool though. It has helped me a lot to be able to sift through and find vuln. targets for the different methods so that i have targets that i can actually practice on. Enjoy everyone!

I've had this a fair few month's now but why change the DL link when you could post the one from the blogspot? Sketchy...

~Arcane ?

kenwhite23 - October 28, 2012, 7:12 pm

hahaha it is the one from blogspot. Its his most recently updated download link. He fixed some bugs in it. If you go to the main page of the blog and click the most recent update they are the same link.

Vouch:

False-Positive.

Program works wonders!

Thanks OP, and thanks Gr3NoX!
