Thread: [Skype image reverse tutorial.](#)

neil5050 - October 29, 2012, 12:46 am

the first thing I usually do is open any user profile in skype and hit print screen

Now upload your image and you can find out where they got their skype image from.

karthikavinash - October 29, 2012, 1:01 pm

Whoa! I never knew this feature on google.

Thanks for the share :)

phybe? - October 29, 2012, 1:03 pm

What purpose would you use this for just out of curiosity? I understand if it's a self image of them you could use it for doxing but I mean, what is your intent?

neil5050 - October 29, 2012, 2:39 pm

To show off saying hey i found your skype picture. You can find out a description about the picture, lets say you see an anime pic and you do not know what it is. You can reverse it and find out the possibly name of the image where they got it from. Find out if some images people claim to be on their profile pic is a fake.

Krimbo - October 29, 2012, 8:29 pm

Very good idea! I also didn't know Google had this feature! Great tutorial, thank you!

Seductable - October 29, 2012, 8:32 pm

You can also use www.tinyeye.com

It traces the picture to see if it was used anywhere else and where it was uploaded to.

neil5050 - October 30, 2012, 5:14 pm

tinyeye vs google

tinyeye = doesn't allow nude images from what I have heard from a friend
