Thread: [zionLabs Password Storage\[VB.net\]\[source\]](#)

You Are Free - March 4, 2010, 1:04 am

A while ago(4 months) I made this, I had it under a different name.

This encrypts that passwords(not sure with what, I didn't check :P).

All I did was change the name, it used to be "CPS"(Caleb's Password Storage).

The only bugs:

Code When viewing your passwords(shown in picture #4), if they contain the deliminators(-) it will screw up, should be an easy fix.

In the password manager(shown in picture #3) it shows "No passwords saved." The user must manually remove it. (though it removes when "Save and Exit" is pressed).

Thanks for looking!

The source can be found [here](#).

Edit:

Apparently images weren't showing, reuploaded them on different host.

Say thanks.

What about them? Work fine for me.

Dr. Hobo - March 4, 2010, 1:12 am

Link is dead?

recue them :D

Thanks, it is pretty useless as there are so many professional ones with more features, and now that the source is out a stealer could be made for it.

You could always change the encryption type. ?

Will be closing this thread/removing the DL link soon, methods included in this are going to be used in future programs of mine.
