Thread: [RE-FUDING The Stub](#)

ahmad_adnan - October 29, 2012, 5:01 am

Hello,

I have A Crypter Source (Private) with built-in Stub & XOR / REJINDAL crypting methods . It got detected how Can i RE-FUD the stub (which is in VB.NET)?

System[X] - October 29, 2012, 5:08 am

Since its private you can email all support teams for all anti-virus software and explain that your program is not a virus :D

100% successful ;)

Thanks

?

You should email source code also they will help you ?

Yes , this is the point i was looking for , now how to change the Storge of RunPe o_0 ?

?TN© - October 29, 2012, 1:24 pm

When you drop your exe file encrypt it and the decrypt it.

This is the RunPe function , no ? Or called Runtime crypt . But this isn't the problem , the problem is the stub is being detected and it's built-in with the crypter . I think There's a method to know the detected line using anti-virus scan , does any one know about it ?

(Oct 29, 2012 11:40 PM)Coleak Wrote: [\[CITE\]](#) Your speaking Chinese to him, if you haven't figured out yet.

LOL , I got what he said , but my problems isn't about RUNTIME , my problems is about the stub is being detected , so If he scanned the file before opening it , it will be detected .

Oh my god, really, you seem to know nothing about crypters at all.

1. Learn to code first
2. Become good at coding
3. Write your own crypter instead of stealing someone elses.

LOL dudeee , I got the Crypter source as a gift , I know VB.NET basics and I partially understand crypting via VB.NET . I know about crypters but im not professional . That's all .

I've tried alot of methods that is published for public about how to re-crypt the stub , including Changing Strings /Crypting Them / Icon / Assembly / Packing , but it didn't work , So i managed to crypt Via offfestlocator and defaced AVG & Avira , but I want to learn How to Crypt Via VB.NET .
