Hi, i need any program like notepad but for mac
because the one that comes with mac(TextEdit) is the shittiest one ive ever seen

Doesnt even let you save a document .php xD so, please.. anyone??

it lets you save a php.
just convert it to plain text (cmd shift t)
and when you save, just name it LOL0L0L.php

Textwrangler is pretty awesome for simple notes.

There is Textwrangler and Fraise.

I suggest one of the two I suggested (there are more but may not be all that great)

I use evernote for taking notes and stuff like that. And just to note you. TextEdit can save .php files ;)

TextWrangler is great same with evernote.

Hope this helped.

Yeah, I agree with the other replies. TextWrangler is definitely one of the best 'notepad' like programs on the mac
