Thread: [Change Extension File ? \(exe to jpg,mp3,txt..\)](#)

love+ - October 30, 2012, 3:12 pm

Hi People

Have any method for change extension of a file exe ?
exe to jpg or another format ?

tux1 - October 30, 2012, 3:13 pm

Use an extension spoofer, but remember it's only a character mapping trick. The file will always be a .exe

love+ - October 30, 2012, 3:15 pm

You are very Faster :D

I know to change manual with character mapping , dont need use spoofer.

hWhat do you think have another method for change exe to jpeg or antother format ?

Cuz i like to send my virus on Facebook, but facebook dont allowed send file .exe only .mp3 , jpg
etcc this its my problem :(

You can't, it's just not possible.

It will be a .exe because it will execute, thats why I said extension spoofing was only a trick. Upload your file to mediafire instead then send them the link.

love+ - October 30, 2012, 3:51 pm

Hmm okey i understand you its not possible to change extension file of exe.

Yeah but if i use Spoofing trick can i send my virus.exe on facebook chat ? have any method for can send virus exe on the chat ?

Vandal - October 30, 2012, 3:52 pm

Just upload the file to Mediafire like tux said. Then send them the link, you are making things a little to difficult.

Yeah i understand thanks for answer but i like send my virus on Fb man :(

Dont like upload my file to Mediafire, i like send my virus direkt..but facebook dont allowed file exe :(

s0vietstr1ke - October 30, 2012, 4:02 pm

1. Mediafire isn't a great place to keep viruses if you want a low detection rate.

2. Use ge.tt it's easier and you can direct link it!

Asp1r3-At0m - October 30, 2012, 4:02 pm

well do you understand that there's no way to put an exe into fb or change the extension? you can put it on dropbox and give the victim the public link

infinitemx - October 30, 2012, 4:26 pm

just because you change the extension doesn't mean that you're changing the signature of the file...so it won't work on fb like everyone said

????A?? - October 30, 2012, 6:18 pm

I wouldn't advise uploading your crypted file to mediafire, atleast if you're using a public paid crypter, but yeah I think you should get a crypter with some extension spoofing, or get a extension changer from google, although it might corrupt your server.

love+ - October 31, 2012, 8:30 am

ahammm :(
thanks people for answerding..!

dreamo2 - August 1, 2013, 10:21 am

when you change the extension with rlo character map is detected as menace called : UNITRIX SUSP there no other solutions

blu3 - August 1, 2013, 11:26 am

you can just rename the "whatever.exe" to "whatever.com" you can use that for social engineering "hey, look at my pics ;) dl link to file named "dirtypics uploaded on imgur.com""
