Thread: [?Owl.s Remote Administration Tool Helpdesk!?](#)

HORIZON - October 31, 2012, 5:40 am

Welcome to my Free Remote Administration Tool Helpdesk!

What I can do for you:

Answer your questions.

Help you set-up your Remote Administration Tool.

Help you set up your No-IP.

Help you forward your ports.

Give tips on how to effectively spread your RAT.

I can also show you how to use your RAT if you are not familiar with it.

Help you make sure that your RAT is working.

What I can't do for you:

I cannot crypt your RAT

I cannot give you test slaves

Why thank you! RAT stands for Remote Administration Tool. Basically with a RAT you have full control over your slave (the person who downloaded your RAT Server). You can View their screen,

look out their webcam, open up a online Keylogger to see what they are typing. I could go into further detail but there are too many details to list in this one post.

If you are interested in starting up Ratting my service is here to help you out.

I would recommend DarkComet if you are using a free RAT.

I will PM you the download link to an untouched dark comet.

Screwed up right there. It is not a "server", but rather a client.
A slave is someone who downloads and runs your client (or infected file). Not a server.

What RAT do you use?: Darkcommet

What do you need help with?: My ports refuse to open, i've had people from other helpdesk's try to help me but they couldn't... Some info would be that i opened those ports a long time ago with a

different computer, now im trying out different ports and even DMZ mode but it refuses to work. (also my ISP site is in spanish but i can translate everything)

Do you have any past experience with Ratting?: Yes, I've ratted before 1 year ago (about)

What is the best way to contact you?: PM here!
