Thread: [\[FREE\] Blackpoint File Binder - CLEAN/FREE AND FUD \[FREE\]](#)

Blackpoint - November 3, 2012, 11:19 pm

Hello fellow Hackitarians ?

Today I will be introducing my first project into the Hack Forums.

The program is FUD, simple and works like a charm.

Features:

- Clean UI ?
- Bind 2 files without any problems
- Change/Add Program Icon ?

VirusTotal.com Virus Scan Results:

File Name: FileBinder.exe

Hey man. I understand where your coming from but let me put it to you like this. This is a HACKS forum. I am smart enough not to upload a virus which any hacker with enough experience could trace me back, rip my source and get me screwed 1000 times more. Download and scan yourself if you like. I promise I have no virus attached.

groudon2224 - November 4, 2012, 7:28 am

Im going to do a few more scans on this before i open it (im paranoid)

Element Scanner

Spoiler [\(Click to View\)](#)

Why you do 2files and scan other and put virus to other.. fucking asshole..

[Scan link](#)

INFECTED FILE!! PLEASE DON'T DOWNLOAD!

Report this thread maker please, thank you!

Blackpoint - November 4, 2012, 12:43 pm

Hey Guys. I swear this isn't a virus. I started on this file binder a few days ago. I will give the link to the VT virus scan. Try scan again just to make sure...

Hey I was just looking through my code and I found out why the program was being picked up as a dropper. I was using a shitty method of encryption to make sure people can't rip my source...

TheNotch3000 - November 4, 2012, 12:47 pm

Blackpoint, your account is started in nov 2012 and your first post is a FUD binder? Posting the virus scan as plain text makes it editable and so invalid. PEOPLE DONT DOWNLOAD THIS(like MonsterYzBR said).

According to your filescan it looks safe, I downloaded it, ran it(in sandbox mode, under heavy supervision), it got detected as virus by both bitdefender(total security 2013) and comodo firewall.

groudon2224 - November 4, 2012, 4:59 pm

Don't download its a couple positive and i dont trust your "text" virus scan

Blackpoint - November 5, 2012, 12:01 am

OK forget my post then. It wasn't a virus but ok. I found out that virus total does something with programs to make the antivirus companies pick them up or however it works...

kali707king - April 19, 2018, 11:15 am

hows every one doing..im in need of

gabbert - April 19, 2018, 2:14 pm

I rewrote the tool with Visual Basic and Antivir also shows TR / Dropper.Gen. Antivir sometimes also displays batch date as threatening.

How do we get it FUD?
