Thread: [Darkcomet not showing slaves](#)

Leon_V._Metcalf - November 4, 2012, 4:17 pm

Hello members of HF. I have been experiencing some problems with Darkcomet. I have correctly portforwarded (when I went to canyouseeme.org, it says that port * was a success) and disabled all my AVs. I also followed Plutonium's tutorial on how to setup Darkcomet (<https://hackforums.net/showthread.php?tid=2698687>), and followed everything mentioned in the thread. I didn't even encrypt the server, I ran it raw on Sandboxie. It doesn't even show me! I also read the "Help" section of the Darkcomet program, and it said something about not using NAT in VMware. Problem is, I have a NAT router. Is this causing the problem? ?

Sorry, this is my first time using a RAT, so correct me if I have any mistakes.

Vandal - November 4, 2012, 4:25 pm

Have you setup a no-ip? That could be your problem. Are you also listening to the port in darkcomet?

Leon_V._Metcalf - November 4, 2012, 6:58 pm

(Nov 4, 2012 05:25 PM)Vandal Wrote: [\[CITE\]](#) Have you setup a no-ip? That could be your problem. Are you also listening to the port in darkcomet?

Oh yes, I forgot to mention that too. I already made an account and used my host name as the address for darkcomet. And I am also listening to a port with uPNP Automatic Portforwarding enabled.

Glad i could help.

Did this, still no luck. I did successfully portforward port 200; canyouseeme.org confirms it, yet, I do not see anyone in the users pane even after I ran the server in Sandboxie....

?

Leon_V._Metcalf - November 7, 2012, 4:20 pm

Nevermind. Tested my server using 127.0.0.1 and confirmed it works. Sorry for the hassle, I'm still new to this. Thank you for all your efforts.

Di?mond - November 7, 2012, 5:44 pm

You might have not port forwarded right, go to canyouseeme.org to check if your port is open.

Leon_V._Metcalf - November 7, 2012, 6:30 pm

Says "Success!" port is open. I have a question, when I run the server in Sandboxie configured to my no-ip address, is it supposed to show on Darkcomet, or am I supposed to run it on another computer in a different network? The only way I found to make myself show up was to run the server configured to 127.0.0.1 on Sandboxie. Thanks again.

The only way I found to make myself show up was to run the server configured to 127.0.0.1 on Sandboxie. Thanks again. It depends, sometimes it shows up sometimes it doesn't. I know that on my network it shows up.

PoisonKnife - November 9, 2012, 6:23 am

Did you use a password when you made the server?
If yes, have you typed it into the client?

Brum The Original - November 9, 2012, 6:24 am

this might be because you used no ip which is for other people use 127.0.0.1 if you're using it on yourself and then it will show up

Leon_V._Metcalf - November 9, 2012, 6:18 pm

(Nov 9, 2012 07:23 AM)PoisonKnife Wrote: [\[CITE\]](#) Did you use a password when you made the server?

No, I did not put a password. I am aware of the glitch...

(Nov 9, 2012 07:24 AM)The Ice King Wrote: [\[CITE\]](#) this might be because you used no ip which is for other people use 127.0.0.1 if you're using it on yourself and then it will show up
Thanks! I think I'm starting to understand how this RAT works. If I used my no-ip address and someone runs it, they will show up right? And do I have to be online with Darkcomet open when they run the server in order for the slave to show up?

Mac1339gold - August 6, 2013, 9:01 am

im sorry to say but the port that you opened is the wrong one. the real one is port 1604 so try that.

T0ucaNSaM - August 6, 2013, 9:09 am

Try Disabling NAT on the router idk if that is an option. What kind of router is it ?

futuro9711 - July 5, 2014, 5:13 am

same prob i have i tried all things i also use 127 type but it also not responding i m not getting where is the problem

Sunday2 - July 5, 2014, 6:44 am

Send it to someones PC you will see them.. the same thing that is happening to you happens to me. when i try rat myself it doesn't show up, but when i send someone my file it will show them on Dark Comet :)

tokkotokko999 - July 5, 2014, 10:13 am

why not send it to a VM that should work, no?

regedit123 - July 9, 2014, 3:40 pm

Did u solve the problem, i want to know cause i have the same problem now... ?

azerxx - October 17, 2014, 7:59 am

Me too.. I have no-ip, port 1604 open but i can't see me when I run the rat in my computer, in an other computer in my home or in a VM .. :(

The Last of Us - October 17, 2014, 8:50 am

Stop gravedigging!

It makes you LQ.

hacklord.chl - November 1, 2014, 4:00 am

pls I have similar problem to in getting my darkcomet working... I have connected my no-ip and forwarded the port to 1604 and I check with canyouseeme and it stated "that my isp is not blocing the poort" and when I test the slave using sandbox it box, it works but when i run on other computer. no slave is showing on my useer list... pls somebody help me. here is my yahoo ID mckinnonhacking. thanks for your help in advance

Universe_X - January 10, 2015, 10:08 pm

I'm having the same issue. I hope 127.0.0.1 fixes it!

jdrana2 - January 11, 2015, 5:37 am

I'm having the same issue. i dont know what is the problem with no ip

xXSIGXx - January 16, 2015, 12:37 am

I'm experiencing similar problems. I'm running DarkComet v5.3 on windows xp for testing but I'm having trouble getting it to show up any slaves. As a test I've purposely launched it on myself several times with a popup message so I know it executes properly and I know all the ports I'm using are open. I think the problem has something to do with the ports but I don't know what. My windows firewall is down and so are all of the antiviruses I originally had running but it still doesn't work. My next test will be to make another host on No-IP and see if that helps, I heard that some extensions cause bugs. I would like to try sending it to someone for feed back but I don't have anyone willing to do it. If anyone is either willing to help test a stub or needs more information then you can email me at SigJamerson@outlook.com

If it takes me a while to respond then I apologize, that's my secondary email and I don't use it often.

Edit: The file could be corrupted. I'm going to download another and run it and see how it fairs.

EDIT: The problem was exactly that. When creating the stub (also called server) the IP you need to register under "network setting" is 127.0.0.1 and then it will work. Just make sure you register the right port too. Thank you all for this post!

Lol might be a bit late but what do u mean open the right port? After setting the ip to 127.0.0.1 wouldn't the standard 1604 port work as well? I'm new to this so sorry if the answer is obvious

Faith Connors - September 1, 2016, 12:41 pm

His account is closed, you probably won't get an answer.

But I will tell you, don't use no-ip or DarkComet. Both are trash, no-ip will give up logs to law enforcement and DarkComet is old, outdated, buggy, doesn't work on Win10, and has a horrible vulnerability.

mertonixx - September 1, 2016, 2:42 pm

See if your ports are open

husonny1 - October 30, 2016, 3:40 am

I have the same problem, when i build the .exe on 127.0.0.1 and run it on my computer, it works but when i use my no ip forward, it doesnt work, (port 1604 is open, i chacked it, firewall disabled, av disabled,) help

M5DD - October 30, 2016, 5:28 am

When will skids learn that darkcomet will fuck you up, stop using it.

Darkkingp779 - March 20, 2017, 11:44 pm

Hello i am haveing the same problem except the when i ran the rat myself my pc showed up on the connections list just fine , i port forwarded correctly i have checked several port checking sites , my no ip is working fine , its just when the target pc opened the stub they didnt connect back to me , im very very confused on the matter so if you have figured it out please let me know . Ps . I did not crypt the stub for testing purposes im not sure if that has something to do with it our not
