If you are going to be involving yourself with any Keylogger, RAT, stresser, bruteforce or cracker tool, definitely consider some form of protection to cover yourself.

Check out my latest program Absolution, aimed at providing a safer environment and settings that are easy to configure.

Hey there. I'm seeing a lot of frustration, with new members as well as some of our experienced users having trouble setting up these RAT's.

I want to end these struggles today by giving you all this simple easy to follow walk through. Just follow basic steps.. and you have your RAT setup. I will make a separate walk through for CybgerGate, and BlackShades, as well as port-forwarding.

-How to Setup DarkComet 5.3.1=-

By

NoodleBot™

Steps before proceeding

Ensure you have a RAT to work with here.

DarkComet V 5.3.1 - <http://www.mediafire.com/?0oimgw2mcjcx2rx>

(uploaded by me for another thread)

Ensure your antivirus is turned off completely before using the RAT. When your antivirus software is on, it will detect the RAT and add an injection detection. Basically, by saying this, I mean that it will send a copy of your RAT server to it's manufacturer. So if you have Avira, turn it off, or you will see more Avira detectons. Etc etc etc. Very simple rule, and this universal rule applies for all types of malware and cryptography.

-DarkComet Server Instructions-

Step 1:

Click on Select Listening ports and do something like this.

Step 2:

DarkComet now displays this on the Socket / Net tab.

Step 3:

You do not need to use a password.

Step 4:

Step 5:

Step 6:

Step 7:

Step 8:

Step 9: Ignore the next few tabs and head to stub finalization.

Step 10:

Name your server and your good to go.

Your server is essentially now ready to crypt and ready for its next stages. I will release another thread on port-forwarding soon - stay posted.

Your traffic must be directed to a port, for this rat you need to activate one of those ports in the Select Listening ports just by entering it into the menu, and then it is open. You can then build a server linking to that port.

Ill be home and ready to help you in a few hours after work in regards to your private message.

I recommend byte protector or envy protector or TLTK by Jerome.

Because your RAT will work just fine if you followed the other settings with the keylogger on or off, it's up to the user.

Surreem - February 3, 2013, 11:32 pm

Because it is a virus. If you download a tool that helps you create virus and your worried about virus detections then this tool isn't for you.

After crypting the file hiding it from antivirus software you are ready to go.

Hi guys, is there a right kind of injection for DarkComet ?

I can choose Self Inject, Default Browser, Explorer, Svchost, Vbc, Cvtres and Regsvcs.

During test I can see that only Cvtres is working fine, is it possible or not ?

Thanks for any info

_Valor - December 23, 2015, 2:02 pm

Hello,

Noodle, I don't know if this was intended or not but this download actually is a backdoor and drops upnp.exe in the temp directory. The tool being detected is understandable, but dropping a .exe in /temp/ is definitely a warning sign. Thankfully I used it in a VM. I wouldn't download this, or go to your temp directory and remove upnp.exe.

NoodleBot™ - December 23, 2015, 2:46 pm

That is most likely directly related to darkcomets port forwarding method.

It's a RAT. Of course it's infectious - but it is not infected in that way.

Of course I know it's infectious, it wouldn't be a problem for the program to be infected. But I got another pop-up from my AV about upnp.exe, which I believe is the port forwarding method. Clean? Possibly. I'd use caution nonetheless, but it appears clean.

clearlyahacker - December 24, 2015, 6:29 am

this installs no ip with your user? im a bit confused guess you ratted me and everyone??

NoodleBot™ - December 24, 2015, 10:52 am

Jesus it's an old settings file. Change it to what you want. Or don't use it at all.

Clearly your a hacker.
