Thread: [\[TUT\] How To Find Admin Pages! Serveral Methods w/ Pictures! \[TUT\]](#)

Noah™ - November 11, 2012, 4:47 am

Hello guys

today im going to be showing you how to find the admin page of a website via several methods!
so lets begin
robots!

This is the easiest method for finding a admincp however will nto always work. basically you need to add a /robots.txt to the end of your site like so

<https://secure.imdb.com/robots.txt>

you will then get greeted with a screen like this :

Spoiler [\(Click to View\)](#)

you then can look through robots in disallow for admincp or admin etc then just enter that as the directory like : <http://www.example.com/admincp/>

Google Method

This method uses only google dorks to search through your target site this is the 2nd easiest method for finding a CP so first of all get your target site's full http adress like such :

<http://www.dawsonera.com/>

then go onto google and type :

site:yoursitehere "admin"

site:http://www.dawsonera.com/ "admin"

you will then be greeted by a list of pages containing admin in the header like so :

Spoiler [\(Click to View\)](#)

you can also use the following dorks :

Spoiler [\(Click to View\)](#)

Code site:example.com "admin"

site:example.com "login"

site:example.com "username"

site:example.com "user"

site:example.com "password"

site:example.com "administrator"

site:example.com "controlpanel"

site:example.com "CP"

site:example intext:admin

site:example intext:login

site:example intext:username

site:example intext:user

site:example intext:password

site:example intext:administrator

site:example intext:controlpanel

site:example intext:CP

Online Page Finder

this method doesn't require any tools and can be executed from a web browser. the most reputable and well known admin page finder is outlaws which can be found here:

<http://tools.th3-0utl4ws.com/admin-finder/>

you must then click the support links and just close them down straight away like so :

Spoiler ([Click to View](#))

you will then be greeted by this page :

Spoiler ([Click to View](#))

you then must enter your URL including the backslash and it will begin the requests like so

Spoiler ([Click to View](#))

it will then display your admin page below.

Admin Hosting

This uses the admincp simply by logging into the controlpanel that webhosting servers give you like so : <http://www.SPAM.com/>

Spoiler ([Click to View](#))

sometimes a admins login details will be on a SQL DB and be the same as the details they use to login to a proper CP so to find out the hoster go to :

<http://www.who.is> and enter your website. you then can go to info and find out the hoster then login with the admins site, email or username.

or simply go to <http://www.examplesite.com/cpanel> which will be a panel provided by default by most web providers!

Admin Page Finder Tools

this is the 2nd to last method and the one that requires tools.

first of all there are several tools that are available, however it is just down to personal preference. The 2 i am going to be showing you today are called

DW Admin page finder 1.1 which can be downloaded from here :

<http://darkwings-dwtools.blogspot.co.uk/2011/02/dw-admin-finder-v10.html>

its one of the fastest out there and it has a big admin page finder.

all you have to do is enter your target website with or without the "/" and it will begin to scan.

the second one is with a classic skid tool : Havij

so start up havij and navigate through the tabs until you get find admin :

then enter your website, select the page extensions (php html asp etc)

and click scan it will display the websites below. like so:

Spoiler ([Click to View](#))

havij's admin page finder is also good as it has a customizable admin page list that can be added to via here the text file admins found in the folder :

[spoiler]

The Crawling Method

the last method is the most time intensive and will require specialised software such as darkspider or aucentix

for this tutorial i will be using aucentix just enter your URL and it will produce a list of all of the pages listed in the website as such :

Spoiler ([Click to View](#))

you then simply locate the directory such as admincp admin login etc

--

Hope this helps many people who request to find an admin page as i see alot of threads in here about this.

MinecraftGeek - November 11, 2012, 4:48 am

Very High Quality tutorial my friend, Thanks a lot for posting this.

Noah™ - November 11, 2012, 4:48 am

thanks bro first tut so i hope its ok :p wanted to give back to the community!

MinecraftGeek - November 11, 2012, 4:52 am

I thought you deserved some more green ?

I hope others find this useful.

Zixem - November 11, 2012, 5:10 am

?Black_Star Wrote:the second one is with a classic skid tool : HavijThis tool isn't for skids unless you know what the tool is doing...meh, I still think that injecting manual is the best way.

Also, you can add a trick that the to the thread that you can enter with the admin details in the hosting site's login page....sometimes it works :3

Nice thread.

Illicit - November 11, 2012, 5:10 am

Very nice tutorial! :)Should be good for new comers ...

Gaspsystem - November 11, 2012, 5:21 am

Thank you for an really good tutorial :) !

Bonfire - November 11, 2012, 8:32 am

Very nice tutorial!

However, the site I'm trying to access is not in http format. It's just the domain, without HTTP

Example: google.com/

Thanks in advance, for any help

yeikel - November 11, 2012, 12:56 pm

In my opinion the best one is The Crawling Method but sometimes others are faster

MireX - November 11, 2012, 1:10 pm

Nice tutorial...

All Methods in one place.

Maybe you can add some color or format your text so that it is easier to read.

Th3PonyWizard - November 11, 2012, 1:15 pm

Admin Page Finder Tools = Online page finder.

Crawling = Page finder tool.

Your grammar is also pretty messed up. I'd recommend a re-write.

Noah™ - December 16, 2012, 5:51 am

to help others out. please use the search bar. don't create new threads cus your lazy xD

Patalach - December 16, 2012, 6:21 am

Thank you for tutorial. Did not know 2 last methods :)

Ram0n.exe - December 16, 2012, 9:38 am

Very nice tutorial man!!

-Ram0n.exe

N3p BoY - December 16, 2012, 10:32 am

Very nice tutorial!

Very helpful for the beginner !

CasperP - January 11, 2013, 9:14 am

Thanks nice. good way.has really been looking for it: P

ekremmert96 - June 15, 2013, 1:42 am

Very good and useful tutorial, thank you :)

Enjoy666 - April 7, 2017, 4:03 am

Thanks for sharing. I will try it.

0b170 - April 8, 2017, 8:18 am

very useful when havij can't find the admin panel lol thank u

Axaros - April 10, 2017, 4:14 am

Wow this sounds amazing! I wish it would work for what I want to
