Thread: [\[TuT\] SIMPLE SPREADING 101 \[TuT\]](#)

?ntei - November 11, 2012, 6:54 am

Welcome to my first tutorial! Today I will teach you simple RAT/Keylogger spreading. Today we will be using the website xat.com

### Starting Off

- 1.) First upload your hack to any file hosting website. (Mediafire, #, etc)
- 2.) After you have uploaded your hack, shorten the URL using a URL shortener. Such as goo.gl bitly.com etc
- 3.) Goto <http://xat.com/> or any similar chat-room website.
- 4.) Find a random chat room with at least 5 people. For this I used Random\_Pokemon
- 5.) In the chat start off by saying "Hi" gain the others "trust" be nice! Be polite! Be respectful!
- 5.) Ask if anyone want to learn to hack, in this example I asked, "Anyone want to learn how to hack Pokemon Black 2"? Instantly someone PM'ed me wanting to know how.

Then once you acquire your victim, give them a link and tell them something convincing, like here is the gen, or her is the hack etc.

- 6.) Normally in XAT it won't let you use links, so just give them the shot link and tell them to type it in.
- 7.) Tell them to download it, in the example the guy said it had a virus, so I told him something stupid, "Ohhh I know why it says that, it's 'cause it has to connect to my server to download hacks." He bought it, and proceeded to download it.
- 8.) Boom, you have your slave, tell 'em to run it and you're all good.

Hope you enjoyed this SIMPLE tut. No hate, it's my first :)

Thanks for this tut works fairly well. Works even better with a crypter then you can skip the step of explaining why it says it is a virus.

not all the guys are stupid  
it depends on how you trap them,,,, hehehehe...
