I don't know why but for some reason i think the code is messed up somewhere in the GeoIP or Log... (My guess)

Edit: Or just try to rebuild/build it .

WOW great job man this actually works. I was freaking out because i wasnt expecting it to work lol. Had to turn off my norton though because it was detected as a W.S reputation 1 but that normally means that it "thinks" its a virus because of its rep status. Great work on this. I also noticed that on the GeoIP it had a DDoSer function and said will be released soon. When do you expect that to be out? Thanks again :D

If you do ad a doser that would just top it off. Also i noticed with the world ends spammer does not work on the newest version of skype. My friend and i tried it (he has the newest version of skype) and it didnt work on him. The spam went extremely slow. On everyone else it works perfectly :D

It says it's an invalid download or deleted file? If you can get it working I'll defiantly use it.

Yes it cleans history i was also trying to add some simple call history cleaner but i thought it's pretty useless since most people use Skype for chat.
