Thread: [\[FREE\] \[FUD\] BLACKHAWK Offline Keylogger \[DIRECT LINK\]](#)

Stormcloud - November 16, 2012, 9:09 pm

This Keylogger was coded in C++ and works great!

I compiled it from a source code I got years ago, I did not code it myself but I thought I would share it with you guys.

(I don't have the source anymore)

Once the file is executed it runs silently.

You can view the keystrokes in a "log.txt" file that is created in the same directory as the keylogger.

This is good for quick use when you have access to someones computer or they are using yours.

To stop the keylogger simply end the process from the Task Manager.

(False positive.. and won't matter because it's offline..

if that puts you off, simply don't download it..)

Please leave feedback.

Enjoy!

Stormcloud - November 18, 2012, 3:26 am

I should have put this in the first post, to be clear there is no GUI, you simply run the program and it
starts logging.
