Thread: [I HIJACKED Part of the L.e.a.k.Fo.r.u.m.s custom theme](#)

Well, I though the navigation/breadcrumb bar of L.e.a.k. F.o.r.u.m.s looked cool, so I copied the CSS with Google Chrome, and edited my themes and templates in MyBB.

Why is L.e.a.k. F.o.r.u.m.s replaced by hackforums?

Nice, that's pretty cool. Maybe LF is competition to HF idk..

@Off-Topic: Still rocking Windows XP, nice!

@On-Topic: It looks pretty nice with that theme, good work!

Is that a theme on XP? I have xp but mine looks like the default theme. Your's looks different.

I use the Royale theme leaked from Microsoft. I saw it on this other guy's screencap and it looked cool, so I installed it.

That looks nothing like Leak-Forums' theme.

It's because there's a no advertise for "competition" websites rule in place.

That's why the word is censored.

That theme has been nulled. :p
