R00T-SNIFFER - November 24, 2012, 4:45 pm

Maybe a dumb question... sorry, been out of the loop for ages! Does this find the IP address that the Skype account was registered on or the IP address of the latest place the user logged in on their skype?

Is this the IP they registered their account with or last signed in on? So if the latest place I signed in on skype with was wifi in a cafe would it show the cafe's IP or still the place I registered? ?

Thank you ?

Thank you ?

The current API resolves the last IP a Skype username logged into. Not the IP the account was 'registered' with, they had to login on Skype. One of the other APIs I have (kind of useless, no I kept

this one as it's simpler) shows around 2 IPs, one has been cached when logged in prior, and a (current)... I hope that I answered your question mate, and welcome back to HF. ?

I don't think it's fixable without a rework. Looks like Skype has blocked the methods that were previously used as all of them have gone down.

momento - January 6, 2013, 7:50 am

May I get the download link. Thanks in advance

Squidward - January 6, 2013, 10:54 am
