Hi,

I am interested to buy one from u. I have some questions. When I will build a keylogger using this software that will be 100% FUD, right? or I need to encrypt that again?

If I bind my keylogger with other software, will it work properly? Which file joiner u suggest to use?

What does "HWID Lock! Protect your Investment" means?

Plz add me on your msn, my id is codebreaker911@live.com

Thanks

Well does the anti-key scrambler work. I would buy if it does. If it works, you will need to prove it live.

I have purchased this keylogger builder from him. Its easy to use and works pretty nicely. His support is great I must say. I have received more than 20 logs so far(I set interval as 15 minutes). The problem I am facing is not getting any username/password inside the log. I am showing a log file below. Other log files are similar with no login information. Anyone else facing the same problem?

Answered your question on msn thanks for posting

nshop1 - March 16, 2010, 12:22 am

I tried the way u said, using downloader to use double keylogger. But no luck. Its still sending logs without password. Plz see the log below, victim failed to login here. That means his password is not saved into his browser. He is manually typing it, but your keylogger could not capture it.

Code {[=====| Login Authentication Failed - Please Login or Signup to
Download Winutilities - Mozilla Firefox |=====]}

Plz check the software and make necessary update. As u said earlier on msn, adding a stealer might solve this problem.

Thanks
