Thread: [VB2008 and VB.NET](#)

iamjasz - November 24, 2012, 8:20 pm

is VB2008 and VB.NET the same? I installed VB2008 in my computer because my brother said that VB2008 and VB.NET is the same. I just want to know if they are the same.

I just want to know if they are the same..Net is the framework on which vb runs on. Vb 2008 generally refers to the ide Visual basic express 2008 edition. Vb.net != vb2008 vb.net != vb2010

Vb.net generally refers to visual basic using the .net framework because an early version of vb, vb6, did not use the framework. Kind of choppy explanation I hope someone while explain it better.

thank you for the explanation. Now i know that vb.net != vb2008. Is VB.NET codes is similar to VB6 codes? Where can i download vb.net? :)

Pussy Cat - November 27, 2012, 6:57 am

VB2008 is the IDE, VB.Net is the language itself.
