Thread: [Do You Have Single/Multi Booter Source Code?](#)

amosroy111 - November 25, 2012, 2:13 pm

i am still learning when it comes to visual basic 6 or .net 2005 and 2008 making programs or hacking tools

and i wonder if you have any DDOSER/booter source that can send unlimited ammount of packets in the port you put like this examples THEY ARE POWERFUL BOOTER also and good coders

GOOD BYE 3.0,5.2 = website URL,or website IP,then port,sub index

i hope you have similar boot or ddos source like these example i give to you its ok if its vb6 .net 2005 or .net 2008 coded its much appreciated

thank you very much and have a good day!THANKS FOR THE HELP!

?Mephobia - November 25, 2012, 2:16 pm

Please do not ever ask this ever again. This: "i am still learning when it comes to visual basic 6 or .net 2005 and 2008." If you are still learning, do not learn by making malware, especially when you are just going to copy and paste the sources. Probably barely going to modify it. I understand you are trying to learn, but maybe you should start to use the search function because there have been plenty of LQ posts of booter sources... All the same basically.

amosroy111 - November 25, 2012, 2:21 pm

uhmm thanks for the tip man..

but dont mis understand what im asking.. im not just copy paste i want to learn also by analizing the codes of those booter and put some improvements.. i know vb6 .net 2005 and 2008.. but not that perfect that like those other coder/programmer

so please dont say that i am only interested those codes or what so ever

its not just hacking tool i made. i want to make my self more familiar with those booter source code for my next project release also

and if you dont want my thread then ignore it.. no one say to comment like that... im just asking!
