Thread: [Help with sending a virus](#)

strangeandunusual - November 26, 2012, 3:14 pm

Does anyone know of a way to bypass the fact that gmail, yahoo etc, won't send a email with a virus attached because it detects it?

Is there an email address I can get elsewhere to send it? Thanks.

T?ny - November 26, 2012, 3:16 pm

send it over skype. or send the a mediafire/ge.tt download link/

strangeandunusual - November 26, 2012, 3:18 pm

Thanks, I've tried the Ge.tt way already but apparently he hasn't opened the file...i'm guessing it might've gone into his spam folder (subject has a gmail account)

Vandal - November 26, 2012, 3:21 pm

Maybe he did open it but his AV blocked it. Is the server FUD? Also he may have just ignored it.

splatoon - November 26, 2012, 3:21 pm

Send a direct download link like dropbox

Offensive Security - November 26, 2012, 3:50 pm

It's called crypting the server so you can email it. If you need it crypted i can do it

Carl Elias - November 26, 2012, 5:04 pm

Don't know about you but I can send a virus in a zip folder if the virus is FUD or crypted for atleast the antivirus the email uses.

-Ty

s1r_n0z - November 26, 2012, 5:10 pm

I agree with 1Syn,the file needs to be crypted and change the .exe extension for something more sutil like: .com,.pif,.scr,.msi,.bat.

Yahoo will let it thru if undetected,gmail...well tose f*ckers wont allow any executionable file at all.

phetamine - November 26, 2012, 5:23 pm

Is there a crypter that someone would suggest to be easier to use and learn with then others?

There are no FUD crypters for free. There are a few that are atleast UD, but only stay that way for like a week, if that. TRy searching there are hundreds on this forum.
