Thread: [\[TUT\] DarkComet Rat Tut 5.3.1 \[TUT\]](#)

hax0rnova - November 27, 2012, 4:24 pm

Hello Guys.

Pictures will be added when i figure out how to

I am here to teach you guys how to set up DARK COMET! ?

Here is what you will need:

Dark Comet 5.3.1

<http://199.91.153.130/tg38cxu7fyng/wy2csx1oi6u41uw/DarkCometRAT531.zip>

Aegis Crypter

<https://aegiscrypter.googlecode.com/files/AegisCrypter1.0.zip>

a No-ip Account

www.noip.com

skills To portforward

www.portforward.com

Right lets get the ball rolling!

First off we will make a No ip account

Fill in your details and voila you have a account registered to no-ip

Now we will add a host :)

The host will act as your server I think i need to google that.

Now with your information set down i want you to download the Duc under download section on the page

Now that's done!

Im no genius in port forwarding but here is how i did it

I opend CMD and typed /ipconfig

Now i scrolled all the way to the top then i see Defualt Gateway :D

There should be some numbers, these numbers is your ip address!

Type those into your url search bar

You will be brought to a page with user and pass, you do that

Go to settings

Add device

Select Manual ports

Make your ports any kind of number i did 1337

Yay we have port forwarded :D

Now run your Duc the program you got off noip

Now the fun bit!

Ratting!!!!!!

Open your Dark Comet 5.3.1

Click the top left hand corner and go to Server Module, Full Editor

Now we will be brought where the magic happens

Okay when you see the first thing that comes up, Click Random 5 times :D

Now on the bottom left hand corner

Click network settings You will be brought to Ip/Dns Right click your Duc to copy the ip adress of your server, And paste it into the box.

Add your port click Add

Now you go to Choose Icon Choose any icon Click build stub at the bottom right hand of the box.
YOU HAVE BUILT A STUB YAAAAAAAAAAAAAY?

Crypting

This will make your stub ninja! ?

Open the crypter Drag and drop your stub into the File Path

Then click add icon.

Click crypt

YOU ARE DONE HOORRRRRAAAYYY

This is my first guide, tutorial Remember to give constructive criticism Pm me if there is any problems and i will help

XxTheHammDoggxX - November 27, 2012, 9:15 pm

Noooooice! I enjoyed that guide! Keep up the good work!

cyb3rzone - November 28, 2012, 3:43 am

No virus scan ??

Be careful when downloading

hax0rnova - December 17, 2012, 5:29 am

Sorry about not having virus scan ect.

Learning the basics of Hack Forums, Thank you for putting this out cyber, This is a DDL leeches from a thread in here ill find it and add it into this also Thank you again for pointing this out :)

tyishere - December 20, 2012, 10:16 pm

Thank you for this, easy to understand and helped me out a lot! Very nice job.

4554552N - December 21, 2012, 3:11 am

This tutorial is horribly to read. Post some pictures and improve formatting.

Gustav. - December 21, 2012, 8:46 am

Improve pictures mate, and please get virus scan.

kawaii - December 21, 2012, 10:15 am

I would advise you include some images and a virus scan for that download, you wont find many people willing to download without something as essential as that.

Sincerely,

Escrow

hax0rnova - February 3, 2013, 6:20 pm

Thank you guys, I am still a smith to this forum and im interested to learn the ropes :D
Hope i can get some help from the community and Join a Help Desk
