Thread: [\[\[How TO Setup Darkcomet 5.3.1 \]\[WITHOUT PORT FORWARD \]\[Free + Download + Pic's \]\]](#)

Orochimaru - November 27, 2012, 6:55 pm

Hey guys, this is my first tutorial that i'm posting on hackforums, this one is about how to setup darkcomet 5.3.1. I will include EVERYTHING you need to know, and the best part is... You DONT need to portforward! Lets get started.

=====

You will first need a few things, here is a list of requirements below:

1. uTorrent
2. Darkcomet 5.3.1 ([Download Link HERE](#))
3. No-IP / DUC 3.0

=====

Okay let's get started:

1. Extract the Darkcomet Folder
2. Open Darkcomet.exe

It should look like this: [Click Here For Picture](#)

3. Open Utorrent and click on Options on the menu at the top. (It should look like this) [Click here](#)
4. Click on preferences and go to connections: ([Should Look Like This](#))
5. Change uTorrent port to 1604 And checkmark every box in that section ([Make your data look like mine](#)). Hit Ok.

(IF YOU WANT TO SEE HOW TO ACTUALLY PORTFORWARD DARKCOMET, CLICK THE SPOILER BUT YOU NEED ACCESS TO ROUTER TO DO IT.)

Spoiler ([Click to View](#)) A. Go to cmd and type in ipconfig

B. Get the default gateway ([Click for Picture](#)) (Mine is 192.168.0.1) And the IPV4 Address (Mine is 192.168.0.16) {Subnet mask does NOT matter}.

C. Type in your default gateway into the URL bar ([Click for Picture](#))

D. Login (If you dont know your router information, search for your router default username and password and try all of them for your router.

E. Go to portforwarding section and copy the information in this picture:

([Click here for Picture](#)). Hit Save Changes

F. Go to Windows Firewall With Advanced Security Program:

([Click here for Picture](#))

G. Go to inbound rules on the left and click new rule on the right. Copy my settings:

[Click for Setting Page 1](#) Hit Next

[Click for Setting Page 2](#) Hit Next

[Click for Setting Page 3](#) Hit Next

[Click for Setting Page 4](#) Hit next

Name it Whatever you want, and give it whatever description you want.

Click finish.

?

6. Go to Darkcomet-RAT Dropdown menu on the top-left corner and click

Listen to new port, select port 1604 and checkmark UPnP

([It should look like this](#)) Hit listen

7. Go to no-ip.com and register/login. Then go to <https://www.no-ip.com/members/> and click add host. ([Click for Picture](#)) Name it whatever you want and save it as no-ip.biz.

Then you should have this: ([WARNING: Potential SPAM or INFECTED LINK image](#)) Copy your link,

for instance mine is dcservervortex.no-ip.biz.

8. Go to <https://www.no-ip.com/downloads.php?page=win> and download DUC 3.0 ([Click here for image](#)) Run the DUC Setup and open DUC 3.0.

Sign in: ([Click here for image](#))

Select Host: ([Click here for Image](#))

Hit save and click Refresh Now, Dont exit DUC 3.0 but minimize it

9. Open darkcomet-rat dropdown menu and go to Server Module > Full Editor (Expert)

Press random for mutex a few times. Go to network setting and put in your No-ip host that you made on step seven, make the port 1604 and press add and click on it. ([Like this](#))

Go to module startup and copy my settings from the picture below: ([Module Startup Settings](#))

Go to module shield and checkmark everything.

Press Build the stub and save it somewhere you want to and name it w/e

That file is the file you will give to people who you want to infect. Although it may be detected by SOME antivirus, but i will make a tutorial on how to crypt your stub and how i made mine 2/38.

Crypting is making it FUD (Fully undetectable, well actually FUD counts from 0/38 to 10/38

Also you want to go to DUC 3.0, refresh it and exit DUC

10. Spread, you can spread through many ways like youtube videos or fake updates on your website or anything.

Anyways you have successfully setup Darkcomet 5.3.1 CONGRATZ! ;)

Now i won't show you the features because that will take the fun out of it all, but once you get a victim or more, make sure to double click him for a huge panel of stuff and Right click him for more stuff. Also, go to EVERY feature because some can be misinterpreted, for example i never thought the extra broadcast commands from the right click would have so much cool stuff like DDoS and open webpages and stuff. But you can steal passwords, view webcams, keylog, control/view screens, hear mics and manage files of your victims. Enjoy! Thank you for listening to my tutorial and hopefully I will see you NEXT TIME!

-----Abido / Vort3x ~ ?

(P.S: If you Used uTorrent to portforward, you can exit utorrent and darkcomet will STILL work!)

Note: People, I DID NOT leech from another post from that other forums... he leeches from ME and my old post got banned, those adf.ly links on the post he stole from me, both lead to MY adf.ly account..

Here is some proof he stole from mine: <http://prntscr.com/kt2c3> - AND - <http://prntscr.com/kt2hw> - AND - <http://prntscr.com/kt2jl>

This is the txt file i made just incase it gets deleted. <http://prntscr.com/kt415> as you can see the file is called HF, now watch this. <http://prntscr.com/kt43m>, look at the date modified on that, compared to when the other guy posted his. :D |I am the original maker|

T?ny - November 27, 2012, 6:56 pm

this was copy and pasted. i saw the same thread yesterday.

Ariana Grande - November 27, 2012, 6:57 pm

Nice tutorial, would help if pictures or something to help the user besides a big wall text for the users to read. Also, they're two separate sections that this could go in. Remote Administration Tools section, or Hacking Tutorials section.

Vandal - November 27, 2012, 6:57 pm

Leeched from a forum that I don't believe we can talk about on here.

Orochimaru - November 28, 2012, 7:11 am

WRONG, All of you are WRONG.. that "JESUS" Guy stole from ME! My old thread of this was

junked because i put it in the wrong SECTION

so i made it in the CORRECT section.. the ADF.LY links in that other guy's posts are leading to MY account... HERE is proof..

<http://prntscr.com/kt2c3> - AND - <http://prntscr.com/kt2hw> - AND - <http://prntscr.com/kt2jl>

ALSO, I saved the REAL post on a sticky note i MADE... on a date BEFORE that leecher copied me. I couldnt find it so i had to use MY post that he edited and he REMOVED the spoilers and pictures for this. But when i find it, ill edit it with the pictures and show you that this was originally made by ME.

host621 - December 16, 2012, 6:09 pm

Thanks man going to try when i get home

L?on - December 16, 2012, 6:25 pm

add my skype:tehkcool and plz help setup my rat plz

mando20007 - December 16, 2012, 10:33 pm

Nice tutorial, uTorrent is a good idea, but does we should close it after make t open the port on router?

Orochimaru - January 10, 2013, 3:24 pm

Thanks guys! @. Vortex | @Mando200007

s0nnyblack - February 14, 2013, 8:21 am

when I registered at the utorrent port 1604 and then 1604 with "listen to new port" enter an error message comes at darkcomet

Error lists

can not listen on port 1604

10048

HellMaster89 - February 14, 2013, 11:53 am

where can i find a good crypting post ?all antiviruses see what i made there ...

Orochimaru - February 14, 2013, 1:16 pm

(Feb 14, 2013 12:53 PM)HellMaster89 Wrote: [\[CITE\]](#) where can i find a good crypting post ?all antiviruses see what i made there ...

Are you looking for a crypter, crypting service, antivirus or website that scans your file with a lot of virus's? Anyways here are some links.

Crypter/Service: <https://hackforums.net/showthread.php?tid=3257043>

Scanning Websites: Metascan-online.com or Elementscanner.com

Antivirus, you can do your own research and see what you prefer.

Anything else, just send me a PM.

s0nnyblack - February 14, 2013, 4:40 pm

Hi Orochimaru

can you please answer my question?

(Feb 14, 2013 09:21 AM)s0nnyblack Wrote: [\[CITE\]](#) when I registered at the utorrent port 1604 and then 1604 with "listen to new port" enter an error message comes at darkcomet

Error lists

can not listen on port 1604

10048

Orochimaru - February 14, 2013, 4:47 pm

(Feb 14, 2013 05:40 PM)s0nnyblack Wrote: [\[CITE\]](#) Hi Orochimaru

can you please answer my question?

1. Make sure to checkmark the UPnP settings
2. Check if it works
4. If it does not work, that means something is using port 1604 besides uTorrent and darkcomet.
5. I skipped 3 ? ?
6. You Just Checked. ok ill stop that now, :P
7. Use a tool, TCP viewer to check which program is using port 1604
8. Fix it up, stop the program from using 1604 and continue.

stefanwarrenb1 - February 14, 2013, 7:58 pm

(Feb 14, 2013 09:21 AM)s0nnyblack Wrote: [\[CITE\]](#) when I registered at the utorrent port 1604 and then 1604 with "listen to new port" enter an error message comes at darkcomet

i get the same message :S hopefully we can solve the problem :(

Diktador - February 15, 2013, 12:30 am

can you check my darkcomet setup i followed everytutorial but i still have problem..

Superior1 - February 15, 2013, 12:31 am

Great tutorial, although they're enough tutorials on RAT's.

Orochimaru - February 15, 2013, 6:42 am

(Nov 27, 2012 07:56 PM)T?ny Wrote: [\[CITE\]](#) this was copy and pasted. i saw the same thread yesterday.

Please check my username changes, then check the username of whoever posted it elsewhere, also check the date of each posts. also read the bottom of the thread, what i added. then talk. -.-

HellMaster89 - February 15, 2013, 7:53 am

Ok ... it seems that System Process is using the port 1604 , State : time_wait . How the hell do i change the port on the system process ?:] sry but im new and i really need a darkcomet virus crypted :D

2 : the crypter you use in your video ... how can i get it ?

Orochimaru - February 15, 2013, 8:09 am

2 : the crypter you use in your video ... how can i get it ?

Thats my friend's private crypter, you have to buy the service. :P

HellMaster89 - February 15, 2013, 8:28 am

i may buy it...but when i get all working out . so how do i change the port from the system process ?:]

SoldierX - February 15, 2013, 8:38 am

Hello Sir,

This Tutorial has been leeches from many places, No doubt about it.
None of the credits goes to you.

POST REPORTED

Kind Regards

My username changes:

https://hackforums.net/misc.php?action=username_history&uhuid=1400876

Next time, please do your research before randomly reporting my threads and saying i leech...

s0nnyblack - February 15, 2013, 2:11 pm

i need a fud crypter for my darkcomet version 5.3.1. I only buy me for trusted people and pay with liberty reserve (\$)

10 - 30\$

regards

HellMaster89 - February 16, 2013, 6:35 am

P.S. on nr 9 u have the same image 2 times . about the module startup u have the network settings img . When i change utorrent to port 1604 the system process does to , is this a good thing ?

Because i receive an error when i set darkcomet to listen to port 1604 ...

coolsway - February 16, 2013, 10:09 am

Can you help me with this? I keep getting error 10084
Cannot listen on 1604:
Only one usage of each socket address is normally permitted

I really want this to work

Edit: Only utorrent is using port 1604, but there are like 5 of it using it all at once...

Puzzels - February 16, 2013, 10:09 am

Could you possibly set it up for me personally ?!

Mr.Notorious - February 16, 2013, 10:10 am

Thanks for the very nice op share man my isp doesn't allow me to port forward so I use blue vpn I am going to try this tough.

HellMaster89 - February 18, 2013, 3:21 pm

Hellooo ... i said i might want to buy that FUD software ... no one cares ?:)

Orochimaru - February 18, 2013, 3:31 pm

(Feb 18, 2013 04:21 PM)HellMaster89 Wrote: [\[CITE\]](#) Hellooo ... i said i might want to buy that FUD software ... no one cares ?:)

Hey, sure. If you would like to check out my FUD Crypt service, take a look at my thread here:
<https://hackforums.net/showthread.php?tid=3268522>

HellMaster89 - February 20, 2013, 6:06 am

I cant post in your marketplace thread . I am interested in buying package #2 . can you send me a PM with your contact details ?

Exodus 23.1 - February 20, 2013, 10:22 am

When opening socket/net 1604 it gives me a @message "10048: Only one usage of each socket address (protocol/network address/port) is normally permitted."

How do I fix this?

HellMaster89 - March 7, 2013, 4:02 pm

I sent u a PM , can you please answer me ?:)

valkstorm - March 9, 2013, 6:00 am

This looks like some scary stuff, time to learn the basics I guess.

godfadanonny - March 16, 2013, 10:05 am

Okay let me say a thing or two. First off many thanks to the OP for posting this. I have searched severally some months back on how to port forward directly and i couldn't get it working, maybe because am on a dialup connection. i then decided to go for Sicklogger which i was using until the logger was down and i started looking into how to port forward and use a RAT.

I had just posted in Jrat section asking how one can portforward in a dialup connection and further searches lead me to this thread i cant even believe it was here..SO GLAD AND MANY THANKS TO Orochimaru.. Now i followed d instructions and i got it working right i guess a Nike tick(good mark) on the DC icon shows its working well.

For those that got an error about other devices using the port, i got the same error but i ignored it and continued and i guess it sorted itself out.. Will update more if i find out more.

Okay a little edit.... i have it working now i was able to log myself and a system am sharing internet with... now i will try external logs and see how it goes.

Also after following the instructions you have to open the no-ip inside the dackcomet and use ur settings there for it to work.

Orochimaru - March 16, 2013, 12:45 pm

Yep and great thanks to you..Now is there anything like free crypters that actually work... tried out a few and i could some unknown process running.

Just want to try out a few things before i buy a crypter.

Nephist - March 16, 2013, 6:54 pm

I see all of these guys saying you 'leeches' the post, but don't worry. o-o

I believe you. :3

Orochimaru - March 16, 2013, 8:41 pm

Just check the proof i provided to be sure! :P

godfadanonny - March 18, 2013, 11:42 pm

Okay i have a question how do i get DC to retrieve chrome passwords.. it shows up with the web address but the user and password fields are blank.

this happens in some slaves not all

unsaidscript - March 21, 2013, 7:59 am

can anyone tell me that how can i remove the virus made by darkcomet to protect my PC ?

westg909 - July 13, 2013, 10:11 pm

Infected File! Deletes itself right after download! Probably binded! Caution Again - Do not download, infected link!
