Thread: [How to bypass each windows user password](#)

Ombra - November 28, 2012, 6:30 am

Well; honestly i have to say that this is a pretty old method, but maybe somebody still don't know this ?

Whit this method you can bypass each windows user (or admin) password in less then 5 minutes, simply erasing it :)

this is an extremely hard process ^^
here is the list of all tools that you need:

Spoiler ([Click to View](#))a brain

this program -> <http://adf.ly/FO5kE> (it's an adf.ly link without advertising, only shrinked ?)

everything that you have to do is:

- burn this on a CD,
- choose CD-ROM as first boot option (in your BIOS)
- follow the instructions that will be displayed in video-mode

in less than 5 minutes you will erase each password that you wish ?

another thing :)

if you already knew this method, understand that i'm trying to help other users who never hear this ;)

if you don't know this method, post a "thank you", to keep live this thread and help other users :)

thank you for reading

Yeah this will work.. Unless they created a bios password. Most people don't, but some people do thus rendering this useless without having admin abilities or removing the CMOS battery. Good method though! Works 70% of the time! <3

Thank you, very useful/helpful method.
Good share mate! Appreciate.

i.o.o.i - November 28, 2012, 9:41 pm

I will try this out. Thanks for the sharing.

Will it work by putting it on a USB and booting from it? Sorry, not quite good at this.

yeah, it work too, but you should choose USB as first boot options,
you should put it in your USB main folder and (i heard) you need to use unetBootin too (i never used this);

usually i used a simply cd-rom, but if you prefer usb...?

channissleeping - November 29, 2012, 7:07 am

Thanks man! I'm def a n00b so I did not know this, but we all had to start somewhere, right? OK? OK.
