Thread: [DDoS Methods Fully Explained | HTTP | R-U-D-Y | Slowloriss | Amplified Attacks](#)

+Haze - November 28, 2012, 10:08 am

Hello there, I've noticed that a lot of members on hack forums don't really understand some of the more complex DDoS/DoS methods such as DNS Amplification Attacks, R-U-D-Y, HTTP Flood, etc. So I stumbled past a you tube account that explains everything in detail with illustrated drawings which I recommend to anyone interested in DDoS.

DDoS Explained:

This is all nice, but I'd like to suggest typing some things out instead of linking videos.

It'd be nice to read all of this in 5 minutes instead of having to watch/skip through the vids.

these are some amazing videos explaining greatly in context what diff DDOS methods are, but sadly I do not believe there is any way to stop DDOS, cept having more servers, the more you have the more " PROTECTION " you have.

That's not true actually. You could have 25 shitty servers and 2 very good servers being able to withstand more DDoS than the 25 shitty servers.

That's like saying 'Where can I download TCP?', it's not a program, it's a method the attack is sent to cause harm.
