Thread: [\[Simple SkypeResolver\]](#) - [\[What you think?\]](#)

xStayOs - November 29, 2012, 1:20 pm

Hello all. I know this is simple and i'm not going to sell out, but I will soon upload it to HF. What you think??

Waffle - November 29, 2012, 1:23 pm

Somebody I helped out recently with an infection said this;

(Nov 29, 2012 09:09 AM)mrdare360 Wrote: [\[CITE\]](#) I downloaded a Skype resolver, I think it was made by someone called StayOS and now my UAC has be set to minimal, there is a file that can't be ran on 64 bit windows in a folder named system32 which is named stayserver6.exe
Link to thread, [here](#). Deal with caution.

EDIT: Spoken to OP, seems like a fairly legitimate user.. I will be analysing what he/she releases :)

Alien. - November 29, 2012, 1:23 pm

Aside from the radio function, there's no way this took up more than 10 lines of code. I like the theme and GUI in general, though.

Khaos Theory - November 29, 2012, 1:28 pm

Well considering your using an api it's nothing special, but no skype resolver really is. Skype resolvers are just overrated and annoying.

Waffle - November 29, 2012, 1:30 pm

It's nothing special, except for the fact that it might be backdoored. If you download it only ever run it sandboxed.

Peanut Butter Jelly Time - November 29, 2012, 1:33 pm

Nice one mate, he is a true member of Area4, I confirm this. He made a better one for Area4 members and no one can have it. :D. Anyway, nice mate. These people are just mate cause' they use LOIC and HOIC, maybe even JaysBooter. Who knows.

Kind regards,
Veracious.

Gørilla - November 29, 2012, 1:36 pm

i like the theme, u should release that. would be really cool<3

SomeWhiteGuy - November 29, 2012, 1:36 pm

(Nov 29, 2012 02:22 PM)?Calamity Wrote: [\[CITE\]](#) Stop... Fucking... Making... These... Resolvers...

They're useless as fuck.

Kelly why are you always right? ?

?WINTER - November 29, 2012, 2:18 pm

What's the point of a radio on a Skype resolver?

And I agree with ?Calamity's post that disappeared.

Coleak - November 29, 2012, 2:26 pm

A webclient with some controls and a theme thrown on, grats OP, another HQ piece of shit.

MaikenBaiken32 - January 12, 2013, 1:47 pm

Beware! When I was friend with this user he asking me for money every time, I didn't gave him money so he DDoSeD, after I said sorry to him etc, but I didn't gave him money. So after he told me I made a skype resolver and I have it infected, he spreading this skype resolver in many forums like leakforums etc, and he got 141 infected persons. All in HackForums! I have to say bewaaaare! Deal with caution with this user!

Samed - January 12, 2013, 1:49 pm

Thank you for letting me know bro.

Appreciate it!

Samed-

Samed-

Yes sir, he has also a botnet and he showed me this is infected, he has IPkiller and barrcuda botnet, he think he are a buisness man roflmao. And secondly, he think he are a hacker because he can ddos me. And this Skype resolver is infected 100% with his RAT he has binded it into his server.

No offence, but there's no point in releasing this.

- 1.) This is a coding section. Why else are you here?
- 2.) He pretty much just posted - albeit not a decent example - everything you need to make a Skype resolver using an API. They are really far from special nowadays.

I just clicked at View New Posts, then this came out.

Sorry

tweety - January 12, 2013, 2:08 pm

Nice you learnt how to use a web browser/web client. Give credits for the theme. That's the only good thing about your shit application.

MaikenBaiken32 - January 12, 2013, 2:17 pm
