THREAD CLOSED BY DezORG, SORRY I HAVE HEARD THAT THESE ARE NOT ALLOWED ON HF, UNTIL FURTHER NOTICE, THIS THREAD IS CLOSED.

Greetings cyber haxorz, i just wanted to give away a quick mock windows live messenger stealer, that basically grabs the username and password they put in and sends it straight to your gmail box, i actually enjoy doing these, if anyone would like to put in a request for a application they would like to see cloned, just PM and maybe i'll do it, depending on how popular this is, Also with this simple FUD forever program, you can easily bind this to a legitimate tool and maybe make it add to startup, so when the victim log's on next he will see this and log in thinking he's just logging into the real messenger. :)

[img]http://www.fileden.com/files/2012/12/5/3373510/Untitled-5.png[/img]

Open the solution up in VB2008 and go into form1.vb and change where the arrows are pointing into your credentials

Bird Is The Word - December 5, 2012, 9:30 pm

This is really simple, but useful for newbies. :)

AnonymousJava - December 5, 2012, 9:33 pm

It's stupid because every reverse engineer can easily enter your email (if he gets the file).

well add a encryption to it.. ?

Spoiler [\(Click to View\)](#)for you

Dubcork_2 - December 5, 2012, 9:36 pm

Please send me the password. It would be much appreciated.

DezORG - December 5, 2012, 9:40 pm

password sent to you, anyone else?

?eumonic - December 5, 2012, 9:47 pm

Let's see how well you recreated WLM. Hit me up with the PW?

DezORG - December 5, 2012, 10:19 pm

Password sent Recuperare :), anyone else want the password?

Sketchy - December 5, 2012, 11:51 pm

Lol, wow people are still using this email bullshit?? There are plenty of ways to get victim information other than email. One can simply pop that executable in .net reflector and log into your account and wait for the information to roll in. Adding in an encryption or blahblahblahlablblahlblah will not do anything because the data will still need to be decrypted..

I suggest looking into PHP :D

TrackPro+ - December 5, 2012, 11:59 pm

Sorry, but this method can be taken and someone can steal your email. If you want a better way of doing it, then check out my thread here:

pr3fix - December 6, 2012, 12:06 am

You probably shouldn't EVER use On Error Resume Next. Wrap your code in try / catch statement(s). That way, you will not know whether or not an error occurred. By the way, you should also encrypt the login details.

AirCode - December 6, 2012, 12:07 am

Fake programs are not allowed on Hack Forums.

Fake. - December 6, 2012, 12:08 am

This looks like phishing, which is banned on HF.
